

F B I

LAW ENFORCEMENT BULLETIN

Peter Colavecchio was indicted by a Federal Grand Jury at Trenton, New Jersey, on February 16, 1937, for the robbery of the Rutherford National Bank, Branch No. 2, at Lyndhurst, New Jersey, on January 25, 1935.

**Federal Bureau of Investigation
United States Department of Justice**

John Edgar Hoover, Director

Washington, D. C.

VOL. 7 NO. 1

JANUARY 1, 1938

The Federal Bureau of Investigation, United States Department of Justice, is charged with the duty of investigating violations of the laws of the United States and collecting evidence in cases in which the United States is or may be a party in interest.

The following list indicates some of the major violations over which the Bureau has investigative jurisdiction:-

National Motor Vehicle Theft Act
Interstate transportation of stolen property valued at \$5,000 or more
National Bankruptcy Act
Interstate flight to avoid prosecution or testifying in certain cases
White Slave Traffic Act
Impersonation of Government Officials
Larceny of Goods in Interstate Commerce
Killing or Assaulting Federal Officer
Cases involving transportation in interstate or foreign commerce of any persons who have been kidnaped
Extortion cases in which interstate commerce or interstate communication is an element
Theft, Embezzlement or Illegal Possession of Government Property
Antitrust Laws
Robbery of National Banks, insured banks of the Federal Deposit Insurance Corporation and Member Banks of Federal Reserve System
National Bank and Federal Reserve Act Violations, such as embezzlement, abstraction or misapplication of funds
Crimes on any kind of Government reservation, including Indian Reservations or in any Government building or other Government property
Neutrality violations, including the shipment of arms to friendly nations
Frauds against the Government
Crimes in connection with the Federal Penal and Correctional Institutions
Perjury, embezzlement, or bribery in connection with Federal Statutes or officials
Crimes on the high seas
Federal Anti-Racketeering Statute
The location of persons who are fugitives from justice by reason of violations of the Federal Laws over which the Bureau has jurisdiction, of escaped Federal prisoners, and parole and probation violators.

The Bureau does not have investigative jurisdiction over the violations of Counterfeiting, Narcotic, Customs, Immigration, or Postal Laws.

Law enforcement officials possessing information concerning violations over which the Bureau has investigative jurisdiction are requested to promptly forward the same to the Special Agent in Charge of the nearest field division of the Federal Bureau of Investigation, United States Department of Justice. The address of each field division of this Bureau appears on the inside back cover of this bulletin. Government Rate Collect telegrams or telephone calls will be accepted if information indicates that immediate action is necessary.

The FBI LAW ENFORCEMENT BULLETIN is published by the Federal Bureau of Investigation, United States Department of Justice each month. Its material is compiled for the assistance of all Law Enforcement Officials and is a current catalogue of continuous reference for the Law Enforcement Officers of the Nation.

John Edgar Hoover, Director
Federal Bureau of Investigation
United States Department of Justice
Washington, D. C.

The year of 1937 has witnessed many notable achievements on the part of law enforcement. More and more the necessity for the training of law enforcement officers is being realized and in the past year more police training schools were inaugurated than in any other similar period in the history of law enforcement. This fact is but a further indication of the professional standing of law enforcement.

Scientific crime detection, while yet in its infancy, is a firmly established factor in modern law enforcement. Identification, a haphazard phase of law enforcement until only recently, has made phenomenal strides. The fingerprinting of criminals is now an accepted matter with most law enforcement agencies.

Despite the professional progress of law enforcement in the past year, we have met with set-backs on many points. Crime throughout the nation has shown a marked increase. This can probably be attributed to several factors. There must be a more sustained effort on the part of citizens and law enforcement officers alike to combat the pernicious factors that have led to this increase in crime. More and more we in law enforcement must demonstrate that the time-proven deterrents to crime are sure detection, swift apprehension, and certain forces; and then we must realize that crime prevention is an important adjunct to our program of crime suppression.

At this season of the year I am filled with hope that we may go forward in 1938 in a more effective discharge of our duties and, on behalf of my associates of the FBI throughout the nation, I want to extend our sincere good wishes for a New Year filled with success, good health, and high achievement to every law enforcement officer in the United States. As in the past, the Federal Bureau of Investigation stands ready to serve you in every problem of mutual interest.

J. Edgar Hoover

Director.

PUBLIC DUTY IN LAW ENFORCEMENT

Address of John Edgar Hoover, Director,
Federal Bureau of Investigation, United
States Department of Justice, delivered at
New York City, December 3, 1937, before
the Association of Life Insurance Presidents.

Law enforcement officers and men engaged in the business of life insurance have many things in common. Both of us attempt to insure life by saving life and we use many of the same methods, although directed in different channels. You have your scientific aids toward the preservation of life - we have our scientific methods by which we endeavor to safeguard the lives of the persons for whose protection we are in part responsible.

Your enemies are disease, accident and violence - ours can be classified almost entirely in the latter category. You work toward your ends by education - we struggle to achieve results by the same method. However, I am sorry to say that at times we are not entirely successful. To those who pay you premiums on their life insurance, there is a personal element and a personal realization of risk which causes them to be much more receptive to your educational programs which, if followed, will enable them to live to a more mature age. Our efforts in education, however, while as thoroughly vital and while directed to the very same persons, who have an equally personal investment in the matter, all too often meet with apathy. Were it not for this widespread public indifference toward crime conditions, for a too general attitude of "let the other fellow do it," we would not be faced with the fact that the criminal army of America is composed of over 4,300,000 persons.

I am sure that you gentlemen have ample reason to appreciate the efficacy of statistics and the need for every available fact to guide you in your business. It may surprise you to know that in the important business of crime eradication, figures and facts and statistics are still in a rather lamentable state. It was not until the Federal Bureau of Investigation a few years ago began to gather statistics from various law enforcement bodies throughout America that there was any picture whatever regarding the extent and fluctuation of crime. Even today those figures are incomplete, although they rapidly are assuming proportions which give us an accurate view of the conditions as they actually exist. Nevertheless, there are many necessary facts still lacking. For instance, we do not know exactly how many criminals are repeaters in crime. As gauged by fingerprints received, we know that fully 55% of all persons arrested have been arrested before. However, the lives of these men and women in many cases were shrouded in mystery until recent years when the growth of the fingerprint division of the Federal Bureau of Investigation, serving all parts of America, revealed their true identities.

There was a dearth of accurate statistics on the disposition of various cases. We found in numerous instances that a person who had been successfully masquerading as a first offender, in reality had behind him a

long string of past violations. Thus you see we are only now beginning to get at the true facts regarding the extent and ramifications of crime, and the picture is truly alarming. Especially is this true in the taking of human life. You, as life insurance men, are, I know, vitally concerned with the fact that there are roaming at large today in the United States some 200,000 potential murderers who during their lifetime will account for the deaths by violence of more than 300,000 persons, unless the present murder rate is reduced.

It should be a matter of most vital concern to know that every 40 minutes a human being is struck down in homicide. It should interest you also to realize that many of these crimes are those of degeneracy, often committed by persons afflicted with diseases which only recently have been discussed in public. Further, as persons who are interested in preventives, you should know that the slayers of the more than 13,000 persons who are our annual homicide victims are extremely blessed by the kindness of lax criminal laws, the eagerness of shrewd and often unscrupulous attorneys, and professional crime magicians, the soft-heartedness of many state parole and pardon boards, and the apathy of the public to the extent that the average murderer in the United States now spends less than 54 months in prison as the result of his crime.

Life insurance companies have a distinct stake in the prevention of crime. Certainly murder is costly to you. The wreckage of human lives brought about by anguish and sorrow should be a consideration. When you realize that there are over 13,000 cases of murder and manslaughter each year and over 47,500 aggravated assaults, any one of which can affect later life, the problem resolves itself into one involving a distinct monetary consideration which cannot fail to be aided by the attention of such great fact-finding bodies as life insurance companies. You have done great work in admonishing the public on the necessity for quick diagnosis and speedy treatment of numerous diseases; you have educated persons on the dangers of cancer, of tuberculosis, and of heart ailments, and within the last few years you have been courageous path-finders in the distribution of information concerning the viciousness of our so-called social diseases. To my mind, crime is as malignant as any cancer, and it is as distinct a subject of health as tuberculosis. Both the victim of tuberculosis and the victim of the slayer may carry life insurance. Tuberculosis victims have a chance to recover. No murder victim ever again rises from his sprawled position where he has been knocked prone by the bullet from the gun of a criminal.

It might be profitable for insurance companies to take more interest in many of our jails and some of our reformatories and penitentiaries. It is a distinct matter of public health to know whether persons are being housed in unclean surroundings; whether they are being forced to remain in the same cells with other prisoners suffering from contagious diseases; whether the mentally unfit are being housed with prisoners of normal mentality, and whether unfit persons are being released to again prey upon the public.

It should be your consideration that law enforcement agencies be given every benefit of proper public support, proper appropriation and as-

sistance. By proper law enforcement, the public may survive; without it, you may be sure that you will pay more insurance and indemnities.

Reverting again for a moment to the matter of prisons and jails, a survey would reveal some appalling facts regarding the number of degenerates who are often improperly incarcerated in surroundings where they can spread their degeneracy to others and thus increase their menace, or who are released improperly, or improperly sentenced, or not removed, as they should be, from communion with our daily life. The surprising increase of degenerate sex crimes within the last few years has revealed an urgent necessity for corrective action by every public-minded body. This is not wholly a problem of law enforcement. In many cases, as you well know, degeneracy can be traced to disease, mental or physical. There should be given to the cure of degeneracy the same thought, the same eager perseverance, the same persistent investigation, that has resulted in the lessening of many other dangerous diseases.

Naturally, the results of degeneracy, taking form in numerous crimes, fall into the hands of the law enforcement officer; however, the causes of degeneracy are things for other persons to inquire into and to seek to cure, and until a program for the suppression and prevention of the causes of sex crimes can be found, we shall continue to see our women assaulted and our children brutally murdered. Law enforcement can apprehend the murderer. Law enforcement, however, cannot prevent the development of the factors which led to that murder. This is a job for the doctor, for the scientist, for the psychiatrist, and for great investigative, public-minded bodies like the life insurance companies of America.

And since we are talking of public duty, it might be well for us to look into some other facts which are just coming to light. There is no doubt that poverty is a factor which contributes to crime, but it is not the sole cause. Poverty, it is true, is the cause of many convictions, for the poor criminal has not the aid of shrewd lawyers or of venal political or other improper influence which may sway the scales of justice. But, we find that most of the major criminals are not poverty-stricken, particularly when one considers that some of our notorious bank robbers have often rolled up an annual income of one hundred thousand dollars. The reason in all these cases is quite simple - the more money a person has, the more friends one has; the more ability one has to summon influence to his assistance in times of stress, the more one is inclined to believe that he can get away with it when he commits a crime.

Let us consider the case of the average citizen. He over-parks his automobile or he commits a traffic violation. He is summoned into traffic court. Immediately he begins a campaign to outwit the law. In one instance that I recall, a man who had committed a violation involving a \$2 fine spent \$50 on everything from influence to plain bribery so that he might have the satisfaction, as he called it, of outwitting the police officer who gave him a ticket. I submit that if otherwise reputable citizens feel that they have a right to fix one form of violation, they cannot very well complain about the criminal who believes in his right to hire a shyster lawyer,

or to bribe a jury in order to get out of a penitentiary sentence for having committed a murder. Crime will continue to increase until public sentiment crushes crime, and public sentiment cannot crush crime until a public consciousness is aroused against all forms of crime.

You gentlemen of life insurance have spent much money in advertising to acquaint people with the tiny causes of great diseases. You have made it a self-apparent fact that many of the things which take our lives are invisible to the eye. The same thing is true of the desperate crime which menaces us today, in which over 1,300,000 major infractions are committed each year, in which there is a robbery every 10 minutes, a burglary every 2 minutes, a larceny every 44 seconds, and a case of automobile theft every 2½ minutes. It is rare indeed that a major criminal starts as such. He begins in a petty way - often with pilfering and other minor violations, finally to feed upon society until he reaches the status of a public menace. When we trace his history, we find that in his boyhood, the cause of his early crimes often was parental laziness, lack of discipline, and failure to set the proper example. The boy who hears his father boast of how he fooled the police in a traffic violation should not be held solely responsible if he too decides that it is smart to outwit the law.

American crime begins in the American home. The only way it can be cured is by a re-establishment of respect for law by the heads of our homes. In this regard, I want to remind you that more than 18 per cent of all our crime is being committed by youths of 21 years or less. Moreover, during the first 9 months of 1937, persons under 21 years of age committed 13 per cent of our murders, 28 per cent of our robberies, 41 per cent of our burglaries, and 51 per cent of all automobile thefts! They did not learn their disrespect for law in our schools. They did not learn it at the grocery store or at the drug store, or in church. They learned it at home. They learned it from parents who took pride in the exploits of rats like Dillinger or "Pretty Boy" Floyd, and who exulted in the freeing of a murderer because this murderer happened to have an attorney more shrewd than the state prosecutor. They gained their disrespect from parents who in many instances were themselves addicted to petty or greater violations of the law.

Since we have been on the subject of values, monetary and otherwise, it might be interesting to look at the record of what proper public support can do toward law enforcement. It has been the happy privilege of the Federal Bureau of Investigation to have the good will and the support of honest citizens everywhere, which led to the proper appropriations and to the ability to build a scientific investigative body on the highest possible standard. The Federal Bureau of Investigation is naturally proud of many accomplishments. We realize that the results obtained could not have been accomplished without enthusiastic aid from the public and other law enforcement agencies. Because of that support and because of that assistance there were 15,777 violators of Federal laws convicted during the last four years in cases coming within the investigative jurisdiction of the Federal Bureau of Investigation. Out of every 100 persons who have been charged with violating Federal laws by Special Agents of the FBI and taken to trial, 94 have been convicted. During this period the cost of operating the Federal Bureau

of Investigation amounted to a little more than \$18,000,000. During the same period, because this Bureau has been allowed to build itself into an efficient organization, it was able to return in savings, in fines imposed, in cases investigated, and in recoveries of stolen goods, a total of more than \$135,000,000 to the taxpayers of America, or more than \$116,000,000 above what it cost to operate the Bureau. In other words, this Bureau has paid dividends to the taxpayers amounting to a return of over \$7 for each dollar spent, which I believe is one of the most profitable investments, public or private, that the American people possess.

I cite these figures, not only because I am proud of them, but because I am extremely grieved that every community in America is not realizing the maximum returns from its law enforcement. I hasten to add that law enforcement of itself is not at fault. The responsibility for the lack of a profitable enforcement in so many of our communities again goes right back to your insurance policy holders - the people of the average American home. If they only could be made to see that it is their business and problem and danger and protection, I feel sure they would be more determined that law enforcement everywhere be raised to a standard of high efficiency and profitable accomplishment. Once that is done, I assure you, crime will decrease automatically, because once the American home can be made to work for law enforcement it will of itself breed respect for the majesty of our laws. Without this, no matter how hard honest men of law enforcement seek to combat it, crime will continue to flourish.

We recently have heard from self-styled experts on criminology, men who believe they know even more than all law enforcement, that crime is definitely on the decrease. Unfortunately, crime is not decreasing and criminals are not reforming. The records of the Federal Bureau of Investigation show that crime is increasing; that more murders, manslaughters, robberies, sex crimes, burglaries and automobile thefts were committed during the first nine months of 1937 than during the same period last year.

I deplore the misinformation, the haphazard ideas, the scrambled suggestions and silly sentimentality of these persons who attempt to cure crime by text-book methods. You cannot wipe out murder, nor arson, nor rape, nor any other crime by coddling criminals. It must be done by the methods of experienced men who know their business, who actually deal with criminals, who from long years spent in tracking down crime and watching methods of those who commit it, have been able to draw up a line of attack which can implant upon the criminal mind the fact that he cannot violate our laws and get away with it.

No criminal who is given the belief that he will be treated with kid gloves, sent to prisons often operated as country clubs, where he has the benefits of loafing, sun-baths, radio, daily newspapers, magazines, motion pictures, baseball, basketball and football, to remain there only so long as he desires to rest up from his criminal activities and then leave on an easily obtained pardon or parole, ever can be persuaded that crime is anything but a highly enjoyable business. Only swift and sure and determined detection and apprehension, plus equally swift and sure prosecution, adequate

sentences, discipline in prison, and a proper release without political or monetary influence, followed by strict supervision, can make any criminal realize that there is majesty in law, and power in the sentence of a judge when he punishes him for his crime.

This naturally leads me to a discussion of the administration of our state parole systems in America. You have heard much of it. You have heard many of our sob-sisters relate at length about how few persons ever are returned for violation of parole. Whether these people speak the badly distorted facts which they so easily utter from ignorance or from a studied effort to delude the American people, I do not know. But the fact is that there is at the present time an apparent and persistent effort on the part of numerous self-styled know-it-alls to delude the people into believing that the administration of parole is a success. This is not true. Parole administration as it exists in all too many of our states is not a success. It is a failure. And it is trampled under foot by thousands of paroled convicts who look upon it as a part of their right. I am not speaking from any standpoint of fanciful theory. I speak from the hard and bitter experience of a man who has seen several of his associates shot down by the guns of members of the underworld who had been the recipients of clemency; shot down by such rats as "Baby Face" Nelson, who was three times paroled; by such vermin as Alfred Power, who walked out of a prison by the parole route by adopting an English accent and thus securing his release for deportation.

Moreover, I speak for every police and other law enforcement agency in America which has seen its brave officers go to their duty to be murdered, often from ambush, by paroled convicts. I hope I speak for every mother, who in the horror of grief, has gone trembling to the city morgue to look upon the defiled, broken body of some innocent child, raped and tortured by some sex-crazed monster who, himself, left prison by the parole method. These are the grounds upon which I speak. And I speak in defense of every decent American who wants his home protected. I am fighting against the cloud of misinformation, the smoke-screen that is being thrown up, why I do not know, to protect murderers, thieves, thugs, brigands, desperadoes and outlaws.

When the records of the Federal Bureau of Investigation show that 55% of all criminals arrested have been previously arrested for other crimes and when the records also show that approximately 50% of all prisoners now are being released on parole, how do the professional parole advocates manage to make anyone believe that hardly anyone ever violates a parole?

Why are these people so much interested in glossing over the vicious parole abuses which exist in so many of our states? Why do they disregard the fact that 30% of the 13,519 dangerous criminals listed in the Federal Bureau of Investigation's single fingerprint file as the country's most desperate kidnapers, racketeers, hoodlums, bank robbers, and extortioners show a record of having been the recipients of parole or other types of clemency not only once, but in many cases as often as four, five, six, seven, eight, nine, and ten times?

There is not an experienced law enforcement man in America who is not harassed by this parole problem; yet these officers who risk their lives in protecting our homes are ridiculed by these advocates of easy freedom who want us to open the doors of every penitentiary to almost anyone who wants liberty. Have you ever heard from any parole advocate, from any one of these professional regenerators, one logical reason why old-time offenders, persons with long, vicious criminal records, should be turned loose on parole, time and time and time again? They do not answer that question. They twist the subject, they squirm about, they throw out smoke screens to make you believe that all persons who object to the abuses of parole are monsters who want to keep all first offenders in prison. They try to make you believe that the complaints against the maladministration of parole are directed against the first offender and not against the persons whom these parole purveyors are really trying to get out of prisons - the old-timers, the vicious criminals, the professional bank robbers, the multiple murderers. They are the ones who get out under many of the state parole systems as they exist today.

No one ever hears any criticism of the Federal parole system and the workings of the Federal Parole Board. The reason is a simple one - the Federal system works. The Federal Parole Board, under the able guidance of Attorney General Homer Cummings, efficiently and honestly tries to free the fellow who deserves to be turned loose and keep in prison the man who should remain there in the interest of society. Any parole board which follows that system will meet with the approval of law enforcement officers everywhere. But when prisoners are turned loose indiscriminately and when individuals who either disguise the facts or are ignorant of the facts seek to make prison merely a stopping place on the way to new crimes, then not only every law enforcement officer, but every honest citizen should rise in persistent protest until such a condition is corrected.

There is no fault whatever to find with any parole system that honestly releases a first offender after he has served a definite period of time and then closely supervises his activities in a proper way after his release so that he may re-make himself into a respectable citizen. No efficient law enforcement officer anywhere ever uttered one word against the legitimate use of parole, against the true theory of parole, against the efficient administration of parole as it really is intended to be - that of regenerating the first offender. What we law enforcement officials object to and what I for one will continue to combat is the interference of venal politics, of improper influence, of excessive sentimentality, which opens prison doors to confirmed offenders, and which sends them out to multiply our taxes, multiply our sorrows, multiply our anguish, and multiply greatly the dangers which we must face from an ever-rising multitude of criminals. If we are to insure life we must also save life, and if we are to insure property we must protect property. For this reason I have tried to present some of the obstacles which we are confronted with daily on the battle front of law enforcement. Because of your positions as leaders in a great humanitarian movement looking toward a better society in the future, we look to you as our allies. And as such, we must stand united in combatting lawlessness, which is one of America's most dangerous, most subversive and most destructive diseases. May we fight it to the absolute limit!

A SIMPLE METHOD FOR DETERMINATION OF ETHYL ALCOHOL IN BLOOD.*

by

Julius C. Abels,

Department of Chemistry, New York University Medical College.

A paper read before the New York Academy of Medicine, published with the permission of the author, the Society for Experimental Biology and Medicine, and the publisher Thomas J. Griffiths Sons, Inc., Utica, New York.

While methods for the determination of ethyl alcohol in blood have been known for many years, all those sufficiently accurate for clinical or medico-legal purposes involve specialized apparatus or difficult techniques. A simple, rapid method of estimating the small amounts of blood alcohol in normal and intoxicated individuals has long been needed. The procedure that we propose is a combination of those of Widmarck (1) and Heise (2) with certain modifications. We have avoided the use of Widmarck's carefully designed desiccating apparatus, as well as his final oxidimetric titration which requires a certain amount of chemical technique, and is, besides, time consuming; we employ only his principle of isolating the alcohol from the blood by desiccation over concentrated sulfuric acid containing potassium dichromate, and this we have much simplified by using rolls of filter paper and ordinary flasks (see below). We have likewise disposed of the initial blood distillation proposed by Heise which has never worked successfully in our laboratory; his final colorimetric estimation of the EtOH by comparing a known amount of dichromate-sulfuric acid solution reduced by it with a set of standards is all that is retained.

In short, the principle of the proposed procedure is to absorb the alcohol from blood caught on a roll of filter paper into a solution of potassium dichromate in concentrated sulfuric acid. This solution is reduced and develops a green or blue color which is finally compared with a set of standard solutions made from known amounts of alcohol.

One ml. of 0.33% potassium dichromate solution in sulfuric acid (made by dissolving 333 mg. dichromate in one ml. of water, and diluting to 100 ml. with concentrated sulfuric acid) is spread on the bottom of a 50 ml. Erlenmeyer flask. 0.5 ml. of blood are then pipetted onto a roll of filter paper prepared according to Fig. 1.

Figure
1.

* This article is published for the benefit of law enforcement organizations by the FBI without comment on the technique.

(1) Widmarck, E., Bioch. Z., 1922, 131, 473

(2) Heise, F., Am. J. Clin. Path., 1934, 4, 14.

The long strip of paper left attached to the roll is inserted between the cork and neck of the flask, thus allowing the absorbed blood to be suspended over the dichromate solution. After being heated from 15 to 30 minutes in a boiling water bath or drying oven at 100°C., the flask is cooled, the cork and wad of paper are removed, and 1.7 ml. of water are added, bringing the total volume of the contents to 3.0 ml. (one ml. dichromate solution, close to 0.3 ml. water from the desiccated blood, and 1.7 mls. water now). The diluted solution is poured into a test tube (6" x $\frac{1}{2}$ ") and its color finally compared with the standard set.

Fifteen standards are made containing 0, 0.05, 0.10, . . . 0.70 mg. EtOH in 3 ml. total volume from 0.01% and 0.05% EtOH stock solutions, water, and one ml. of the dichromate-sulfuric acid solution. These standard systems are heated 10 minutes in a boiling water bath, and the test-tubes (6" x $\frac{1}{2}$ ") are then tightly corked and sealed. If they are exposed as little as possible to the light they keep for at least 2 weeks.

Thirty determinations using water alone and all the types of filter paper in our laboratory failed to show any dichromate reduction. Applying the method to the determination of alcohol in the bloods of various animals, we obtain the values in Table I.

TABLE I.

Animal	No. observations	%EtOH
man	40	0.000-0.010
pig	3	0.005-0.020
dog	3	0.005-0.010
ox	3	0.010

Experiments were also made on samples of ox blood to which various amounts of alcohol were added. The results of these are shown in Table II.

TABLE II.

No. experiments	mg. EtOH added to 100 ml. blood	EtOH found (average)	Aver. blank	Recovery %
30	0.100	0.104 \pm .004	0.010	94
10	0.200	0.204 \pm .007	0.010	97
10	0.300	0.290 \pm .017	0.010	93

It is quite necessary to use freshly drawn blood in this procedure for we have found as much as 25% of the EtOH to be destroyed upon keeping the blood sample in the ice chest for 24 hours, and more than 50% after 72 hours.

MACRO METHOD: The above method has been extended to determine similar concentrations of EtOH in as little as 0.05 ml. of blood. This amount can be easily obtained from a single finger puncture; a 1% solution of picric acid is employed for sterilizing the skin.

The principle of the method is the same as above, and except for

2 minor changes, the technique is unaltered. 0.20 ml. of the dichromate-sulfuric acid solution are pipetted onto the bottom of a flask such as shown in Fig. 2; the finer the pipette is, the less chance is there of smearing

Figure
2.

any of the oxidizing solution on the inside of the neck of the flask, with consequent reduction by the filter paper when later introduced. This source of error must, of course, be avoided, and can be by using a fine pipette. 0.05ml. of blood are absorbed onto a roll of filter paper (Whatman's hardened No. 5, 1" diameter) which is suspended over the dichromate solution as in the macro method. The flask is then heated in a boiling water bath or drying oven at 100°C. for 20 minutes, cooled, the cork and paper removed, and the contents of the flask finally diluted with 0.07 ml. of water, bringing the total volume to 0.3ml. The flask is tipped on its side allowing the contents to flow into the side arm; and the color of this resulting solution is matched against a series of standards contained in small test tubes with an internal bore and wall thickness the same as those of the flask projections.

Eight standards are made containing 0, 0.20, 0.40, 1.40 mg. EtOH in 3 ml. total volume from 0.20% EtOH stock solution; water, and 2.0 ml. of the dichromate sulfuric acid solution. The systems are heated for 10 minutes in a boiling water bath, and 0.3 ml. of each are pipetted into the small test tubes which are immediately sealed.

Twenty-five determinations, using water alone on the filter paper, failed to reveal any reduction of the dichromate solution as long as a hardened filter paper was used. Soft papers are to be avoided, for in dealing with so small a volume of oxidizing mixture, a small thread of paper falling into it will invalidate the results of an experiment. Thirty-two determinations on human blood placed the EtOH concentration of human blood very near 0.00%, and certainly under 0.025%. Forty experiments on artificially prepared bloods containing from 0.10% to 0.30% EtOH gave, after subtracting the blanks, recovery value of from 100% to 107%.

We have also been able to apply both methods to a study of the

blood alcohol concentrations during various stages of intoxication, and have found the two to agree within $\pm 3\%$. This latter study was undertaken in order to correlate the symptomology of such stages with the corresponding amounts of EtOH in the blood. We divided the cases into 4 groups, as:

I. Chronic alcoholics then sober; II. mildly intoxicated individuals; III. markedly intoxicated individuals; and IV. individuals showing clouding of consciousness (semi-stuporous to comatose).

Although this method really measures the reducing substances in the blood volatile at 100° - 105° C., the amount of these other than ethyl alcohol is normally small; acetone, the second largest fraction, constitutes about 20% of the total (3). In diabetic coma, however, the amount of free acetone may reach 25 mg. %, (3) but there can be no danger of diagnosing this as an alcoholic coma where the "reducing power" of the blood is at least 8 times this value. We have run a determination on the blood of a patient in terminal diabetic ketosis, and have found the sample to possess a reducing power equivalent to only 0.015% EtOH.

Paraldehyde, a substance much used in the treatment of alcoholics, also does not interfere with the results. Bloods of patients in comas from paraldehyde poisoning show normal alcohol values.

Small mistakes in dilution in the macro method introduce no significant error, for what is really measured is the quality of the resulting solution. The macro method lends itself better to a quantitative study of alcohol in the blood, as might be required in problems on its metabolism; the micro method is sufficiently convenient and accurate for clinical diagnoses of alcoholism.

I wish to express my gratitude to Dr. I. Greenwald for having suggested this work, and for his very kind interest in, and many helpful suggestions to the problem. I also am indebted to Dr. R. K. Cannan and Dr. N. Jolliffe for the ready cooperation they extended to me at all times.

Summary: A method is presented for the determination of EtOH in blood. We have applied this method to the estimation of alcohol in the bloods of various animals and the bloods of men in different stages of intoxication. This procedure, we believe, should prove useful in many problems involving alcoholic intoxication.

SPECIAL ANNOUNCEMENT

The attention of all law enforcement officers is called to "The Murder of Edvard Rustad" which appeared in the November 1, 1937 issue of the FBI Law Enforcement Bulletin.

Mr. Kr. Welhaven, Commissioner of Police, Oslo, Norway, Vice President of the International Commission of Criminal Police has supplied the information concerning the case. Any aid which law enforcement organizations in this country may render in the solution of this crime will be appreciated.

THE METROPOLITAN POLICE COLLEGE
HENDON, ENGLAND.

by
W. H. Drane Lester,
Inspector, FBI.

For many years the Home Office authorities and the officials of the Metropolitan Police Department of London, England, probably better known as Scotland Yard, felt the lack of adequate training courses for outstanding men who might wish to become ranking officials of the Metropolitan Force. As a result, the Metropolitan Police College was established in May, 1934, for the instruction and training of especially selected men to be graduated as Junior Station Inspectors. Various courses for other officers of the Metropolitan and Provincial Police Forces throughout England and Wales have been added.

The College occupies spacious grounds on the outskirts of Hendon, England, a suburb of London about forty minutes' distance by automobile or subway from the heart of the city. The grounds and buildings are noteworthy and compare favorably with any university campus in England or the United States.

The men chosen to take the training for Junior Station Inspectors at the Metropolitan Police College are carefully selected and of outstanding ability. Each class of new trainees totals thirty, and the men are selected by three distinct methods.

Usually five or six of the group are required to be English university graduates, the age requirements being twenty to twenty-six years. These five trainees are selected by a Police Board, including the Commandant of the Police College, and in making the selections, careful consideration is given to the general background and all-around qualities of the candidates, as well as their academic background. There are a large number of applicants for each of these five positions (they average, I understand, about eighty applicants for these five positions). Final appointment depends upon the impression they make upon the Examining Board. There is no written examination.

Six or seven members of each class of thirty men are obtained by a competitive examination conducted by the Civil Service Commissioners and open to applicants who may or may not be members of Police Forces. Several of these applicants, who have been successful, also happen to be English university graduates and a certain number of them have had previous police experience prior to entering the College. There is no set limit as to the number of men who might apply from this source and the number of applicants is rather large. The age requirements for this group of men are also twenty to twenty-six years at the time of their appointment to the College. A large proportion of the marks awarded in the examination are for "Interview and Record" so that the candidate whose qualifications are purely scholastic is not likely to succeed.

The remaining eighteen members of each new class are selected from outstanding policemen already members of the Metropolitan Force, the age requirements at the time of appointment being twenty to twenty-six years and their final selection being based on character, education and general adaptability to police work. Any member of the Metropolitan Force within the age requirements may make application, but his chance of success is not great unless senior officers familiar with his work, specifically recommend him as a candidate. The selections made from existing policemen sometimes secure still other university graduates, and it is estimated that approximately one-third or ten members of each class of thirty are university graduates, although only five or six of that number are required to have such qualifications.

The Selection Board, of which the Commandant of the College is a member, deals with the appointments from two of the three above described groups of applicants (the third being based on competitive examination), and the appointments are made on a merit basis.

Two schools of thirty men each were in session at the time of my visit to the College in June, 1937, and the plan is, I believe, to have at least two schools running concurrently at all times. Up to June, 1937, there had been three classes or a total of ninety men graduated from the Metropolitan Police College.

The trainees are divided into groups of fifteen and the groups encouraged to compete with one another in athletics, studies and general police activities. Care is exercised in the selection of these respective groups to make them as nearly equal as possible in ability, and equal care is exercised in seeing to it that none of the appointees are given any special distinction or privileges of any kind as compared with fellow trainees. The College is operated on a residential basis and the men live in the College buildings. They are required to dress in dinner jacket suits for dinner.

A noteworthy feature of the training course is the fact that every week one of the 4 groups or "Stations" (into which the trainees are divided) is on duty under its "under officers" for such purposes as fire pickets, night patrols, etc. They thus gain experience which will be useful to them later as Junior Station Inspectors.

The class periods during the day are broken up into six forty-five minute periods, including drill and physical training. The trainees are released every afternoon at three-thirty for athletics and games, including swimming in an indoor swimming pool which is housed in the main building. The trainees are given Wednesday and Saturday afternoons off for sports, and there are no Sunday classes. The trainees are given three vacations a year, the longest being the summer vacation.

The entire training school course of the Metropolitan Police College, at the time of my visit, lasted eighteen months, but beginning with the September, 1937, class, the course will be increased to two years. The College is fortunate in having housed under one roof practically all equip-

ment, classroom facilities and practical police paraphernalia, including miniature police departments and court rooms.

The esprit de corps, as well as the discipline, is splendid and the College itself is run along somewhat the same lines as an English university.

Upon graduation, the trainees of the Metropolitan Police College do not immediately become Junior Station Inspectors but are required to serve an apprenticeship lasting several months, performing various types of actual police work and gradually working up the scale before they begin active duty with the rank of Junior Station Inspector.

In addition to the above described course for Junior Station Inspectors at the Metropolitan Police College, the following special courses, both for Metropolitan Police officers and for Detective officers throughout England and Wales, are offered periodically:

A Detective Training Course for Senior Officers, lasting six weeks.

A similar Detective Training Course for Junior Officers, lasting eight weeks.

A special thirteen weeks' course of instruction for Station Sergeants prior to promotion to the next higher rank, stressing particularly administrative duties and those duties in which Desk Sergeants in the United States would be particularly interested.

A special Motor Traffic School and a special Wireless School.

REPORT ON AMPUTATIONS, MUTILATIONS, ETC., REQUESTED

In accordance with a suggestion recently received from one of the Bureau's contributors of fingerprints, attention of identification officers is invited to the importance of reporting to the Bureau any information ascertained by them with reference to amputations, mutilations, or other changes of condition of the fingers affecting any change in the fingerprint classifications of persons whose records have previously been submitted to this Bureau. It has been suggested that superintendents and record clerks of identification bureaus maintained at penal institutions secure the cooperation of prison physicians in keeping them informed of amputations, mutilations, and other changes. It is understood, of course, that amputation or mutilation may radically change the fingerprint classification.

Identification officers and record clerks to whom information concerning any of the above indicated changes is available are requested to communicate with this Bureau with reference thereto, when it is known that fingerprints have been furnished to this Bureau prior to the change.

A QUESTIONABLE PATTERN

The accompanying reproduction is of a very interesting and thought-provoking type.

It is believed that in some circles this pattern would be classified as a whorl. However, under the strict definition of a whorl, it is necessary that there be two or more deltas with recurving ridges in front of each delta. A complete circuit in the center of the pattern would, of course, meet the requirement of the two recurving ridges. These requirements are absent in this pattern. The pattern, therefore, cannot be classified as a whorl. Furthermore, it cannot be classified as a loop as there is no re-curve flowing in front of bifurcation "A" which might otherwise serve as a delta.

In the technical files of the Federal Bureau of Investigation, the pattern would be classified as a tented arch, consideration being given to the formation at points "B" which removes the pattern from the plain arch type. It is thus found to fall within that group of impressions classified in the Bureau's Identification Division as tented arches due to the presence of ridges which, either in changing their direction from upward to downward or in striking into an arching ridge, form an angle in the center of an arch type pattern. It is believed that this pattern may cause confusion because of the relatively large open area surrounding the dot in the center.

The Bureau would be glad to receive any discussion concerning this pattern from interested identification experts.

NATIONAL BANK ROBBERY ACT

On May 18, 1934, the President approved an Act of Congress (Section 588, Title 12, U. S. C. A.) making the robbery of National Banks and member banks of the Federal Reserve System a Federal offense. This Act was amended on August 23, 1935, to also make the robbery of insured banks of the Federal Deposit Insurance Corporation a Federal offense. Another Act approved by the President on August 24, 1937, further amended the original Act to include burglary and larceny. The Federal Bureau of Investigation has primary investigative jurisdiction of violations of the Act and the amendments. The Act, as amended, reads as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That as used in this Act the term 'bank' includes any member bank of the Federal Reserve System, and any bank, banking association, trust company, savings bank, or other banking institution organized or operating under the laws of the United States and any insured bank as defined in sub-section (c) of Section 12-b of the Federal Reserve Act as amended.

"Sec. 2. (a) Whoever, by force and violence, or by putting in fear, feloniously takes, or feloniously attempts to take, from the person or presence of another any property or money or any other thing of value belonging to, or in the care, custody, control, management, or possession of, any bank; or whoever shall enter or attempt to enter any bank, or any building used in whole or in part as a bank, with intent to commit in such bank or building, or part thereof, so used, any felony or larceny, shall be fined not more than \$5,000 or imprisoned not more than twenty years, or both; or whoever shall take and carry away, with intent to steal or purloin, any property or money or any other thing of value exceeding \$50 belonging to, or in the care, custody, control, management, or possession of any bank, shall be fined not more than \$5,000 or imprisoned not more than ten years, or both; or whoever shall take and carry away, with intent to steal or purloin, any property or money or any other thing of value not exceeding \$50 belonging to, or in the care, custody, control, management, or possession of any bank, shall be fined not more than \$1,000 or imprisoned not more than one year, or both.

"(b) Whoever, in committing, or in attempting to commit, any offense defined in sub-section (a) of this section, assaults any person, or puts in jeopardy the life of any person by the use of a dangerous weapon or device, shall be fined not less than \$1,000 nor more than \$10,000, or imprisoned not less than five years nor more than twenty-five years, or both.

"Sec. 3. Whoever, in committing any offense defined in this Act, or in avoiding or attempting to avoid apprehension for the commission of such offense, or in freeing himself or attempting to free himself from arrest or confinement for such offense, kills any person, or forces any person to accompany him without the consent of such person, shall be punished by imprisonment for not less than ten years, or by death if the verdict of the jury shall so direct.

"Sec. 4. Jurisdiction over any offense defined by this Act shall not be reserved exclusively to courts of the United States."

In order to constitute a violation of this Act the bank robbed must be a National Bank, a member of the Federal Reserve System, insured by the Federal Deposit Insurance Corporation or a bank organized or operating under the laws of the United States. The property taken from the bank may be of any type and the Act covers both actual taking and attempts to take.

To constitute a violation of the Act the robbery must be accompanied by force and violence or putting in fear. However, this element is not necessary to constitute a burglary or larceny as defined in the amendment that was approved by the President on August 24, 1937.

Obviously, in the case of bank robbery, the term "force and violence or putting in fear" would include the use of dangerous weapons, firearms and other devices intended to instill fear. It also covers cases of physical violence such as slugging, tying up, and taking property by force directly applied to the person who has possession of it.

The new amendment to the Bank Robbery Act makes it all inclusive and sneak thievery, that is, where an individual surreptitiously takes money or property from an employee of a bank, or out of a teller's window, is now, by virtue of the most recent amendment, covered by the Bank Robbery Act.

The property involved must belong to or be in the care, custody, control, management, or possession of the bank. The property or money need not be in the bank itself, but the Act covers hold-ups of bank messengers and bank trucks which occur outside of the bank building. The property taken may belong to a private individual or a customer of the bank, but may be in the custody, control, management or possession of the bank at the time and thus come within the provisions of this Act; this includes cases where securities, et cetera, are taken from the safety box of a client of the bank at the time of the hold-up.

It is to be noted that the Act provides a greater penalty in cases where a person is assaulted or anyone's life is put in jeopardy by the use of a dangerous weapon or device.

The Act also provides an alternate penalty of any term of imprisonment for not less than ten years or death if the verdict of the jury shall so direct in cases where the robber kills any person or forces any person to accompany him without the consent of such person, (1) in committing any offense defined in this Act, or when (2) the robber is avoiding or attempting to avoid apprehension for the commission of an offense under this Act or (3) in freeing or attempting to free himself from arrest or confinement for such offense.

The Act as now amended provides a penalty of \$5,000 fine or imprisonment for not more than twenty years, or both, for any person who enters or attempts to enter any bank, or any building used in whole or in part as

a bank, with intent to commit in such bank or building, or part thereof, so used, any felony or larceny. This provision covers burglary of the types of banks enumerated in the statute.

A penalty of \$5,000 fine and imprisonment, not more than ten years, or both, is provided for any person who shall take and carry away with intent to steal or purloin, any property, or money or anything of value exceeding \$50, belonging to, or in the care, custody, control, management, or possession of any bank mentioned in the statute.

The statute as now amended also makes provision, and provides a penalty for, thefts of property, money, or any other thing of value of \$50 or less. The penalty in this case is a fine of not more than \$1,000 or imprisonment for not more than one year, or both.

The Act also provides that jurisdiction over any offense under this Act shall not be reserved exclusively to courts of the United States. Robbery of National Banks, member banks of the Federal Reserve System and insured banks of the Federal Deposit Insurance Corporation is also an offense which can be prosecuted in State Courts as well as in Federal Courts, or in both without resulting in double jeopardy.

It should be noted that the statute refers specifically to any building used in whole or in part as a bank but apparently the words "so used" restrict the commission of the enumerated offenses to those sections, of any building used by the bank, where they are occupied jointly by a banking institution and other enterprises.

All violations which come to the attention of local law enforcement officials which appear to fall within the terms of the National Bank Robbery Act should be reported to the nearest field office of the Federal Bureau of Investigation. A list of these offices is set forth on the inside of the cover of the FBI Law Enforcement Bulletin.

A GUIDE FOR PREPARING ANNUAL POLICE REPORTS

The Federal Bureau of Investigation has available for free distribution copies of the pamphlet entitled "A Guide for Preparing Annual Police Reports." The pamphlet was prepared by the Committee on Uniform Crime Records of the International Association of Chiefs of Police in 1929 at the time the uniform crime reporting system was devised. The Guide has been adopted by the International Association of Chiefs of Police and is recommended by the Federal Bureau of Investigation. It contains numerous suggestions concerning the types of information which may be included in a comprehensive annual report to be prepared for transmittal to the Mayor, City Manager, City Council, and other officials and agencies interested in the problems and achievements of the police department. It is believed that the Guide will be of interest and assistance to a large number of police administrators. Copies of the Guide will be gladly furnished without charge upon request addressed to "Director, Federal Bureau of Investigation, Washington, D. C."

REVIEW
CRIME, CROOKS AND COPS

by
August Vollmer and Alfred E. Parker

Crime detection is an art and every criminal, no matter how careful he may think he is eventually is led to the police either by clever detection on the part of law enforcement officials or because of some error committed by the criminal. So in their book "Crime, Crooks and Cops," Mr. Vollmer and Mr. Parker expound this theory proving it by actual cases, by the activities of well known criminals and conclude with a discussion of law enforcement personnel and the part public opinion can play in encouraging law enforcement.

Herbert Wilson who was an intelligent person desired to pursue a criminal career and schooled himself in the methods of law enforcement so that he might better follow his work. He removed his glove to turn off a light while on a job so that an approaching officer would not see him at work and left his telltale fingerprint. There were others who were clever, but they eventually were victims of their own game.

They may be clever, but they leave something behind that shows their identity and it is the work of the police officer and the investigator to find that clue. It may be in the disarrangement of the room, it may be in the small particles of lead from the fatal bullet, it may be in a few strands of hair from the scene of the crime, it may be in a camera study of the locale after the crime was committed, but there is the one clue which will eventually detect the criminal.

In addition to being a scientific investigator an officer should be familiar with the modus operandi of the criminals in his community and alert to the activities of the questionable characters. A part of good crime detection may be in following a hunch as the investigating officer did in the case of J. P. Watson, a modern bluebeard. Watson's wife caused an investigation to be made of her husband believing that he had contracted a bigamous marriage with her. Several marriage licenses were found in his possession and liberty bonds which Watson claimed were legally his. He was given a chance to prove ownership of the bonds by the officers. However, before he proved ownership he sought to commit suicide, not because he had stolen the bonds - they were really his - but because of other criminal acts. He had been married, to the best of his memory, twenty-three times and had disposed of his wives by murdering them, the exact number he could not recall. But it was the hunch of these officers that the bonds had been stolen which resulted in Watson's confession to the murder of his many wives.

One of the chief abuses of the parole system is the failure to have trained men to handle the system. Until there are trained men we cannot hope to prevent future criminals from continuing to attack our society. There should be established schools or courses in schools for the adequate training of persons who are to have the control of future parole problems. Herein lies the solution of our trouble. A part of the problem might be

solved by a study of the reasons for persons falling by the wayside and pursuing a criminal career.

A part of our problem might be solved by appointing men to judicial positions who are peculiarly and specially trained for the work, and the method of selection should not be by election, because the elected official will lend himself to showmanship to continue himself in office. As to the men who constitute the police force--they are generally honest. But keeping a police department straight, determining the policies, satisfying the cranks (and there is always a goodly sum), are only a few of the problems which face a police executive.

Well trained, intelligent officers are a step forward in law enforcement. Strangely enough, some men do not possess the ability to become police officers; they have neither the intelligence, the initiative, the leadership nor the tact to handle police problems. It is up to the police executive to select as carefully as possible the man who is to be the cop of tomorrow.

In commenting on the Federal law enforcement agencies the writers conclude, "Regardless, however, of the obstacles which confront the Federal Special Agents, they are making their mark in the world of police. In the future they ought to become increasingly effective. At least J. Edgar Hoover is planning that they shall. Not that they are to replace local and state police, but, rather, that they are to supplement local police and to handle those crimes which are obviously national in nature.

"Hoover hopes, also, to see the day when a national training school can be organized which will impart the latest methods to our various law enforcement organizations.* He dreams, too, of a state police in each of our states and of a national teletype or radio communication system by which every police department in the nation can be informed daily of the criminal's activities. Hoover is doing more than dreaming about these developments--he is working for them whenever he gets a chance. In the meantime, while these new possibilities in the police field are being sought, J. Edgar Hoover is in charge of a group of men who are causing criminals to hesitate before they get themselves in wrong with Uncle Sam's cops.

"Our next major objective in eliminating crime should be the encouragement of greater respect for law. But we cannot attain respect for law until we build family integrity. If more parents taught their children respect for authority, crime would gradually disappear; for with family integrity would come community integrity. A community should be proud to have a record for orderliness. We have not attained this attitude sufficiently in this country. Once we do, once we have a situation where citizens of our towns and cities are concerned when they know their crime rate is mounting, then we shall have progressed to a state of existence where public opinion will stamp out crime in so far as it is possible to do so."

* The FBI National Police Academy, established in July, 1935, affords instruction in police problems and scientific crime detection to representatives of local, state and municipal law enforcement organizations.

Mrs. George Roberts, the cashier of a theatre in Vergennes, Vermont, received a check from a patron when the same was offered in the purchase of two tickets to the performance. The check proved to be a forgery. One week later, Paul C. Shortsleeve presented another check to the cashier under similar circumstances. George Roberts, a Deputy Sheriff, was notified and the alleged forger, Paul C. Shortsleeve, was taken into custody. Known handwriting and the questioned checks were submitted to the Technical Laboratory of the FBI and after examination the contributor was notified by telegram that Shortsleeve had written the questioned checks. Upon being informed of this information the defendant pleaded guilty and was sentenced to one and one-half years in the House of Correction, Windsor, Vermont.

SPECIAL ANNOUNCEMENT

Due to the ever-increasing number of index cards in the Bureau's name files, law enforcement agencies are requested, whenever practicable, to submit records to the Bureau's Identification Division under the subject's full name, that is, making use of the middle name, as well as the first and last names.

To this end, when the current supply of criminal and personal identification fingerprint cards is exhausted, the Bureau will furnish to its contributors fingerprint cards which contain a request that not only the given name and the surname but also the middle name of each person fingerprinted be furnished.

Indices at the present time contain more than 9,000,000 index cards. Obviously some cards indexed only under the first and last names, or the first name, middle initial and last name, are duplicated many times, and the search of the index for a particular name, therefore, is prolonged to a considerable extent. At the present time, for instance, there are about 105,000 cards under the name of Smith. Of this total approximately 4,000 are under the name of John Smith, and more than 150 are under the name of John W. Smith. When the Bureau receives a request for a criminal record, photograph, or other data for one John Smith or John W. Smith, not only does the search for the record require a considerable time, but also the identification of the record is in some instances less certain because the name is not distinctive.

Law enforcement agencies are particularly requested in subsequent inquiries to refer to records by the exact name under which those records originally were submitted. For instance, when a fingerprint card showing an arrest has been submitted under the name of John Webster Smith, the disposition when submitted at a later date should set out that exact name. This is important because in the event the disposition is reported under the two names John Smith, the 4,000 cards under that combination may all be examined in an effort to identify the record to which reference is made. Even then the identification desired may not be effected unless the search is extended through all the combinations of John Smith from John A. Smith to John Webster Smith. Of course, if an FBI number is known this should always be furnished, inasmuch as such a number enables the Identification Division immediately to locate the appropriate record without the necessity of conducting any search of the name files. On the new type of arrest and institution fingerprint card that will shortly be furnished to the Bureau's contributors, there will be a space reserved and designated on the reverse side of the cards for the FBI number.

The Bureau believes it is desirable to reduce the methods of reporting names. It believes that aliases generally should not consist merely of various combinations of the subject's real name. It is suggested, however, that any arrested person should be permitted to sign his fingerprint card according to his normal style, and that this form of his name, if not identical with his true complete name, as set out at the top of his fingerprint

card, should be recorded as a variation of the name. This signature name on a fingerprint card is always indexed as an alias in the Bureau's records when it differs in any respect from the name set out elsewhere on the card.

The Bureau's suggestions in this matter of complete names, as well as the new type of fingerprint cards mentioned above, are advanced in an effort to make the extensive records maintained in its Identification Division more readily available for the service of all law enforcement agencies. The assistance of contributing officials, therefore, will be a matter of cooperation with the law enforcement profession generally.

FINGERPRINTS PROVE INSURANCE AGAINST PAUPER'S BURIAL

Fingerprints today are being put to many uses. Not only do they identify fugitives and enable the Federal Bureau of Investigation to transmit previous criminal records on individuals to interested law enforcement agencies and institutions, but they are coming into wider use in commercial, civil and private life. Amnesia victims and missing persons, should their fingerprints be on file in the Bureau's Civil Identification Section, can be identified. Victims of catastrophes, individuals involved in automobile accidents and unidentified deceased persons can be readily identified if their finger impressions are on file in a central clearing house. The Bureau receives each month many sets of impressions of unidentified deceased individuals and is able to advise the law enforcement official or agency transmitting these fingerprints of the prior addresses and the antecedents of these unfortunate persons when they have previously been fingerprinted on the occasion of arrest for major or minor offenses during their lives.

On November 13, 1937, there were received in the Identification Division of the Federal Bureau of Investigation from the Police Department at Union, New Jersey, the finger impressions of an unidentified white individual who was killed by an automobile on November 10, 1937, in the vicinity of Union, New Jersey. All attempts by that law enforcement agency to effect an identification locally were fruitless and the personal effects of this individual did not give a clue to his true identity. However, when the fingerprints of this unfortunate victim were searched in the Identification Division of the FBI he was identified as being one George King. George King was not a hardened criminal, but his record in the files of the Identification Division reflected that on five instances prior to his demise, during the years of 1936 and 1937, his fingerprints had been transmitted for search to the FBI for various misdemeanors. All these misdemeanors had been committed in the State where he met his death. An examination of the data appearing in the Bureau's files reflected that as recently as September 1, 1937, he had been received at the Essex County Penitentiary, Caldwell, New Jersey, to serve a thirty-day sentence for being a disorderly person. The Bureau's records reflected the birthplace of George King as being Newark, New Jersey, and his most recent residence was shown as 22 Longworth Street, Newark, New Jersey.

Upon effecting the identification, this information was dispatched by telegram to the Chief of Police at Union, New Jersey.

Fingerprints of Twins not Identical

FREQUENTLY ALLEGATIONS ARE MADE THAT THE FINGERPRINTS OF "IDENTICAL" TWINS ARE IDENTICAL. WHEN CLAIMS OF THIS SORT HAVE COME TO THE ATTENTION OF THE FEDERAL BUREAU OF INVESTIGATION, THE ACTUAL FINGER IMPRESSIONS OF THE PERSONS INVOLVED ARE OBTAINED AND ANALYZED FOR CLASSIFICATION PURPOSES.

A RECENT INSTANCE OF THIS CHARACTER INVOLVED

NO TWO FINGERPRINTS HAVE EVER BEEN FOUND TO BE IDENTICAL

THE FINGERPRINTS OF AUGUSTE AND ELFRIEDE SEJVEL OF AUSTRIA, WHO WERE REPORTED TO BE IDENTICAL IN EXTENSIVE NEWS COMMENT. THESE FINGERPRINTS WHEN EXAMINED BY THE TECHNICAL EXPERTS IN THE BUREAU WERE FOUND, OF COURSE, NOT TO BE IDENTICAL. REPRODUCTIONS OF THE FINGERPRINTS, THE PHOTOGRAPHS OF THE TWINS, AND THE CLASSIFICATION OF THE FINGERPRINTS APPEAR HEREON. AN EXAMINATION OF EACH FINGER REFLECTS THE USUAL STRIKING DISSIMILARITIES.
