September 1, 1956

TO ALL LAW ENFORCEMENT OFFICIALS:

There is no crime more heinous than that of the child molester. Feared by society and despised even by the basest members of the underworld, he is alert to any opportunity to ravish a defenseless young victim. At this time of year, we must be especially alert to the threat posed by this vicious and degenerate criminal element.

During the next several weeks, thousands of youngsters will be starting off to school. Some will be returning to classes after the care-free interlude of summer vacation. Others will be leaving for the first time the sheltered atmosphere of happy homes and loving families. Helpless and innocent, they will be potential prey for the foul ravaging of the sex fiend. Waiting stealthily in the deserted alleys of the commercial district, the tree-shaded lanes of the residential area, and in the very shadow of the school building, he is devoid of all semblance of moral decency as he seeks to glut his evil desires. The scarred souls and devastated lives of little children will be the fearsome price of failure to curb him in his vile deeds.

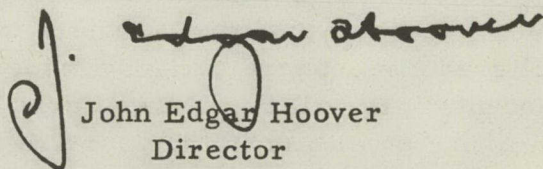

Sex crimes are warm-weather crimes. Last September, reports from police in 2,643 cities showed that in the category of rape alone, offenses averaged no fewer than 31 every day. The incidence of rape in 1955 was almost 6 per cent higher than in 1954. By far the most infamous of sex attacks are those perpetrated against our children.

It is imperative that we meet the menace of the child molester head on. Commendable efforts by police are already being aimed at educating the public to the impending danger. In personal appearances, articles, and specially prepared pamphlets, law enforcement officials are dramatically focusing civic attention on the problem. This must be a continuing campaign, and the tempo of the attack must be redoubled in seasons when opportunities for the sex offender to commit his crimes increase.

Insuring the physical safety and moral well-being of our youth is a task for all of us. Parents must teach children to be wary of the lurking stranger, to beware of the invitation to go for a ride, the proffered candy, or other enticements. Police must pay particular attention to the likely haunts of the depraved child molester--the secluded park, the vacant lot, the lonely street. Prompt reporting of sex crimes is vital. The mother who tries to hide her ravished daughter from embarrassment, administering medicine-chest first aid and keeping silent about the crime, commits a grave injustice to her own and other children. Authorities must give every consideration to protecting the names of victims. Proprietors of youthful gathering places have an obligation to be alert to suspicious persons and incidents. Swift and vigorous prosecution, and proper medical treatment where needed, are also essential. Positive action must be taken against known sex offenders.

By recognizing the danger and working together, we can thwart the child molester in his career of savage brutality. By pursuing him relentlessly and removing him from society, we can prevent the misery his crimes bring to countless homes each year.

Very truly yours,

A handwritten signature in dark ink, appearing to read "John Edgar Hoover". The signature is written in a cursive style with a large initial "J" and "E".

John Edgar Hoover  
Director

## FEATURE ARTICLE

# Chicago's Safety Program Stresses Cooperation

by COMMISSIONER TIMOTHY J. O'CONNOR, *Chicago Police Department*, and CHIEF GEORGE A. OTLEWIS, *Chicago Park District Police, Chicago, Ill.*

In July 1955, Mayor Richard J. Daley announced with justifiable pride that Chicago had won the 1954 National Traffic Safety Award. For many years, Chicago trailed the other major cities in traffic safety; in fact, from 1949 through 1952, it had the poorest traffic record of any major city in the United States. In 1953, Chicago advanced to third place and at last, in 1954, was on its way to becoming the Nation's safest major city. In order to accomplish this feat, Chicago had reduced its automobile death rate 23.7 percent since the inception of its intensified traffic program in 1947. In addition, the municipal court of Chicago was awarded the American Bar Association Award

for its extensive improvements in the city traffic courts, and the Institute of Traffic Engineers presented its annual award to Chicago's traffic engineers for their efforts in engineering and construction work. The acquisition of these three outstanding awards clearly displays the accomplishments which could have resulted only through the harmonious efforts undertaken by each individual agency of city government to advance Chicago in its safety program.

It has been only through the combined efforts of the municipal court of Chicago, the clerk of the municipal court, the State attorney's office, the Chicago Park District Traffic Engineers, the city

Commissioner Timothy J. O'Connor, Chicago Police Department.

Chief George A. Otlewis, Chicago Park District Police Department.

traffic engineers, the Citizens Traffic Safety Board, the Northwestern Traffic Institute, the traffic division of the International Association of Chiefs of Police, the park district police, and the Chicago Police Department that the objective dreamed of in 1948—making Chicago the safest major city in the United States—became a reality in 1954. Chicago is the only major city to show a reduction in traffic fatalities in 1953, 1954, and 1955 despite ever-increasing motor vehicle registration. Each of these agencies devoted sincere and concentrated attention to eradicate the tremendous death toll through application of the three pillars of traffic success—education, engineering, and enforcement.

How Chicago—the city which led the Nation with 505 traffic fatalities in 1947—had reduced this figure to 385 and was able to win the National Traffic Safety Award in 1955 is perhaps best explained by the splendid cooperation existing between the two police departments which have the responsibility of safeguarding its citizens: the Chicago Park District Police and the Chicago Police Department. It is appropriate that the members of the International Association of Chiefs of Police, who are having their 63d annual conference in Chicago from September 9–13, can avail themselves of the opportunity to observe and study this cooperative effort during their stay in Chicago.

The Chicago Park District Police is headed by Chief George Otlewis, general chairman to the International Association of Chiefs of Police Conference this year, and has a total complement of 1,016 officers. The Chicago Police Department is headed by Commissioner Timothy J. O'Connor, conference host, and has a total complement of 8,073 officers of which 1,018 are assigned to the traffic division. Although the primary purpose of the park district police is to patrol 12 beaches, 167 parks, 206 miles of boulevards and 28 miles of Lake Michigan shoreline, both the park and city police have equal police powers within the confines of the city of Chicago.

### **Education**

An outstanding example of this cooperative effort can be seen in the safety educational program undertaken in Chicago in 1953. At that time, Chicago was suffering the highest traffic fatality rate of any major city in the Nation with 458 traffic deaths, of which total 275 were pedestrians.

As a result of the large number of pedestrian fatalities, a campaign was undertaken to reduce

this needless loss of life. It was decided that the first action must be to conduct a gigantic traffic educational program. As it later developed, this was to be the largest traffic education program ever attempted. Billboards and transportation platform posters warned the public to be careful: *Learn the Law, Obey the Law; Stop, Look, Live; Drunken Drivers Go To Jail; The Life You Save may Be Your Own!* Spot announcements were made on television and radio almost every hour of the day and night. Church leaders stressed the safety campaign from the pulpit. Every major city newspaper, as well as 75 community papers, carried feature articles and advertisements stressing this safety campaign. Over three million pieces of literature were distributed by safety organizations, churches, schools, and industrial organizations. Pedestrian warning slogans were painted on streets and curbs of busy intersections. Every agency in the city was assisting in the traffic safety program. This was only the beginning.

Police Commissioner O'Connor and Park Police Chief Otlewis established special training classes for officers of all ranks, with special stress on motorist-pedestrian rights and responsibilities. The traffic education units toured the business streets in special safety squads equipped with loud speakers warning jaywalkers and other traffic violators.

During this initial phase of education and indoctrination, the police directed their attention to the motorists. During this period, only courtesy warnings were given. Actual arrests were restricted to the flagrant cases of willful disregard of pedestrian's safety. About 6 weeks later, the police department directed its attention to the pedestrians. Again the program continued with only warning notices to pedestrian violators. This campaign resulted in greater compliance on the part of pedestrians.

During the first 6 months, arrests for violation of failure to yield pedestrian right-of-way were increased 200 percent over the preceding year. Arrests for hazardous moving violations were up 52 percent over the preceding year. During this program, Chicago district police increased its arrest ratio 93 percent, Chicago traffic police increased its arrest ratio 51 percent, and the park district police increased its arrest ratio 31 percent. These forces coordinated and concentrated their efforts toward one goal—making Chicago the safest city in the Nation—and culminated their efforts by successfully reducing the traffic fatali-

ties by 22 lives for the first 7 months over the preceding year.

Among the many important agencies which have contributed to the success of Chicago's traffic program are the Northwestern University Traffic Institute, and the traffic division of the International Association of Chiefs of Police.

These agencies organized the forces in 1947 which actually launched the initial study of the city's traffic problem and the recommendations which occurred therefrom represented the basis of Chicago's present traffic program. Some of the more outstanding accomplishments are:

1. Aiding in the reorganizing of the Traffic Division and helping to train its personnel.
2. Developing the "nonfix" traffic ticket.
3. Assisting in the reorganization of the Municipal Court Clerk's Traffic Violations Bureau.

4. Conducting through a consultant an administrative traffic engineering service to the city.

5. Training in the Northwestern Traffic Institute 23 park district police officers and more than 150 city police officers in various phases of traffic courses.

6. Training several city and park police commanding officers in a special traffic administration program.

The agency which perhaps has done the most to educate the general citizenry on traffic safety in Chicago is the Citizens Traffic Safety Board. This agency is a privately financed organization composed of business and industrial leaders of the city. Its purposes are to stimulate all governmental actions which will improve the flow of traffic, and by educational means to bring about on the part of the motorists and pedestrians proper

*Chief of Traffic Phillip J. McGuire inspects Traffic Division of the Chicago Police Department.*

law observance and courteous driving that will keep accidents at a minimum.

Some of the recent accomplishments brought about in whole or in part by the Chicago Citizens Traffic Safety Board are:

1. Development of one-way streets.
2. Passage by the General Assembly of the new driver's license law.
3. More vigorous prosecution and realistic sentencing of traffic violators.
4. Encouragement and recognition of good police work in traffic.
5. Prohibition of parking on major streets to improve traffic flow.
6. Production and distribution of educational materials in areas where education is needed.

In 1951, the education of police personnel was extended from traffic specialization to a general course of police education. The program, unique in the field of police training, was designed by Dr. Peter Masiko, Chicago Board of Education, together with the cooperation of Commissioner of Police Timothy J. O'Connor and Deputy to the Commissioner Charles O'Regan. The program is geared strictly for police personnel and is taught by members of the city's three junior college faculties. The courses are: report writing, type-writing, first aid, public speaking, human relations, criminal law, psychology, and juvenile delinquency. The attending officers earn 15 hours of college credit by attending classes 2 days a week for 4 hours a day for 2 semesters. At the present time, 405 officers are in attendance and 1,050 have been graduated.

## **Engineering**

The city of Chicago has 3,660 miles of streets open to traffic. These streets are regulated by 76,650 traffic control signs and by 1,232 traffic stop-and-go intersection lights. Into this city's downtown business section on an average working day come 218,713 vehicles, comprising 1,134 streetcars, 6,174 buses, 163,609 private automobiles, 20,823 trucks, and 26,973 taxicabs. These vehicles transport 851,879 persons with perhaps 42 percent of this traffic concentrated into the preworking and post-working hours.

Such a tremendous vehicular flow creates a gigantic problem for the city traffic engineers—a problem which they must reconcile if Chicago is to maintain its fine record in the field of traffic safety.

The concentrated efforts and remarkable success of the city and park traffic engineers and the city Bureau of Street Traffic and Parking are manifold indeed. However, the most outstanding are: the conversion of the traffic flow into one-way streets (by the end of 1955, 366.2 miles of streets had been restricted to one-way travel); and the installation of 27,000 parking meters since 1951 to help eradicate the street parking problem.

In December 1952, Chicago began its \$50,000,000 off-street parking program. Approximately \$13,000,000 of this sum was appropriated for the construction of nine garages and eight parking lots. These garages are now operating. Four are located in the downtown area and the other five are located in the near northside of the city. They provide parking facilities for 6,767 automobiles. The parking lots are located in various community business districts and provide parking for an additional 1,302 vehicles. In addition, the Chicago Park District maintains a new underground garage on Michigan Avenue which provides space for 2,359 vehicles as well as two large parking lots located on the lake front. These two lots handle approximately 9,500 cars each day. Once again the combined efforts of various city agencies step forward to alleviate a tremendous parking problem.

Between 1953 and 1955, Chicago appropriated \$21,000,000 for a new street lighting system for both the business and the residential sections of the city.

Beginning in 1946, Chicago undertook the task of constructing a system of super highways to expedite the flow of traffic to and from its loop and its environs. This system provides for public transportation lines down its center. The highway will be free of traffic control lights and cross traffic, and turning will be done by grade separations and cloverleaf turns. The first of these, the Congress Street super highway, will extend 15 miles from the loop directly west to Elmhurst, Ill. Portions of this road are already in use and its completion is expected in 1959. Other super highways will extend from the loop to the northwest, southwest, and southeast sections of the city.

Chicago scored another first in 1955 when it initiated a radio traffic signal control system. This revolutionary type of traffic light control was developed by R. F. Michel, city traffic engineer. The system regulates 11 intersection traffic signals on North LaSalle Street as well as two other complicated intersections of the city. By means

of a master pilot located in the city hall, electronic impulses are transmitted to the intersection lights and thus by remote control the traffic flow can be automatically regulated.

### **Enforcement**

Speaking about the value of selective enforcement, Chief of Traffic Phillip McGuire has said, "Our enforcement program is selective in that it is directed toward the hazardous moving violations which are causing accidents. Police are proving that arrests for hazardous moving violations are being kept at a high level and fatalities are being reduced as a result."

The ultimate success of any traffic enforcement program originates in the Police Traffic Records and Analytical Units. It is the responsibility of these units of the Traffic Division to categorize, analyze, and tabulate the type of accident infor-

mation, the areas of the city suffering the greatest percentage of occurrences, and the time of day having the greatest number of violations. It is upon the conclusions established by the Analytical Unit that the enforcement program must be predicated. In Chicago, these statistical computations are passed on to the various units of the Traffic Division.

The Motor Enforcement Unit concentrates its efforts on the apprehension of violators in sections of the city which are experiencing an extremely high accident and/or violation rate. The success of this manner of enforcement can best be explained by citing the following experience.

In 1951, the Analytical Unit reported that Western Avenue was the most hazardous street in Chicago. The Motor Enforcement Unit, district squads, and park district police concentrated enforcement on this street. As a result of this effort,

*Morning in-bound traffic at Lake Shore Drive and Roscoe Street, Chicago, Ill.*

by 1953 the arrest index was 25 for the street and 18,578 motorists were arrested for hazardous moving violations. The pedestrian death and injury total was reduced from 249 in 1951 to 219 in 1952 and 198 in 1953. This represents a decrease of 51 pedestrian deaths and injuries in 2 years and is truly a remarkable tribute to the concentrated efforts of the park and city police.

Another essential adjunct of the Traffic Division is the Accident Investigation Unit. The primary responsibility of this unit is to obtain accident data. This is a necessary duty: first, the officers must determine whether or not a violation has caused the accident; and second, they must supply the Records Section with the proper data upon which to tabulate its statistical findings. During 1955, there were 91,152 traffic accidents investigated by the police and of this total the Accident Investigation Unit made 79.3 percent of them. Arriving at the scene of an accident, the unit is prepared to render first aid, obtain necessary data, measure skid marks, take photographs of the accident, arrange for the removal of the wreckage, and make arrests when necessary.

Other essential duties handled by this unit are the investigation of hit-and-run cases together with the apprehension of the responsible persons, and the operation of the "Drunkometer."

### ***Traffic Courts***

Another outstanding factor in Chicago's successful traffic program is the \$4,000,000 municipal traffic center. Prior to the acquisition of this new building, the adjudication of traffic cases was scattered throughout the city. With this new traffic center available, all traffic courts and traffic police administrative operations are consolidated. A tremendous improvement brought about by this centralization is the reduction in court time required of police officers. It is estimated there will be a saving of 250 police man-hours per day because of this centralization. Other innovations include random assignments of cases, thereby lessening the possibility of the defendant learning beforehand what judge will hear the case; transportation of court records by pneumatic tubes which will lessen the possibility of the records becoming lost or misplaced; mustering of police officers in special general assembly rooms for their comfort and the court's convenience (the officers are notified by loud speaker when they are needed

in court); a record system which contains a complete history of each defendant; and a traffic violations school for those defendants found to be lacking in knowledge of traffic laws and responsibilities.

In 1953, a total of 1,301,215 traffic violators were ticketed by the city and park district police. Of this total, 450,024 or 34.6 percent were cited for hazardous moving violations. However impressive this may seem, 193,992 of these violators failed to appear in court; consequently it became necessary to have warrants issued for their arrest. The public apathy in this matter created a tremendous obstacle toward the successful completion of the Chicago traffic program. It was because of this situation that the municipal court of Chicago demanded that motorists either post a cash bond or a driver's license whenever they are personally served with a court summons. This plan strongly enhanced the possibility of the violator's appearance in court. The success of this program exceeded all expectations. Traffic records show that from May 1, 1954, to April 30, 1955, police issued 421,883 traffic summonses requiring a cash bond or a driver's license. A total of 311,020 or 73.7 percent paid their fines before the court date, another 7.1 percent paid after receiving a warning letter of pending arrest, and the traffic courts disposed of 15.8 percent of the total. This system thus achieved a total of 96.6 percent settlement. Prior to the employment of this system, it was necessary for almost 40 percent of the violators to be apprehended by arrest warrants.

### ***Conclusions***

As the death rate across the nation continues to mount and the traffic safety engineers look ahead to the hazards of winter driving with apprehension and anxiety, Chicago's traffic program continues to carry forward to greater safety records. For the first 3 months of 1956, Chicago was the safest city of its population group with a ratio of 3.1 deaths per 10,000 registered vehicles and was enjoying a 20 percent reduction of traffic deaths for a comparable period of 1955.

Chicago, The City in the Garden, extends to all members of the International Association of Chiefs of Police a hearty welcome to their 1956 convention site and sincerely hope that all visitors will adopt its motto, "I WILL," to help make their Chicago visit both enjoyable and safe.

# CRIME PREVENTION

Austin, Minn., has a population of approximately 25,000. Our school population is about 8,400 students. A community with that many youth will have a wide range of juvenile problems.

Our police department consists of 30 men. The need for a juvenile bureau had been a subject of discussion among the members of the department for a considerable period of time. The proposal to establish such a bureau, supported by many local groups, was presented to the city council in the spring of 1954. It was approved and authority was given for me to proceed.

My plan called for the appointment of a patrolman as juvenile officer, with our police matron working out of his office under his jurisdiction. The police matron would take care of the clerical work and help with female cases. Selecting the right man as a juvenile officer is the big problem. I cannot place too much emphasis on this phase, since choosing the proper man can make the project a success, the wrong man can make it a failure. This man has to have all the qualifications of a good police officer and, in addition, must have an interest in juveniles, together with a sincere desire to help them with their problems. He must be willing to work long hours and be "on call" at all times. He must be aware of public relations and the importance of public relations to his sphere of activity. He has to be an accomplished public speaker, as he will be called upon to speak to many groups from all walks of life. He has to become a proficient investigator and have special training in various phases of juvenile work, much of which training can be obtained after going on the job.

In Austin, we have our local civil service commission with responsibility to conduct promotional examinations. While the State civil service commission had prepared examinations for regular juvenile officers, our local commissioners felt we should go further in the selection of the right man for our particular assignment. It was finally decided that we would use the Kuder Preference Test, which is used extensively in our local

## ***Need for Juvenile Bureau in a Small Police Department***

by CHIEF OF POLICE GEORGE N. ROOPE, *Austin,  
Minn., Police Department*

school system to test likes and dislikes, or interests. This test is not foolproof, however, and there are many available today which are equally helpful. The score from this test, the results of an oral interview, and the past efficiency record of the applicants were combined as a basis from which to pick the man best suited for the position of juvenile officer.

Our juvenile bureau became a reality on April 1, 1954. Due to limited facilities in the department, the bureau was housed in a separate building, which is within a block, however, of the police department. All juvenile records were transferred to the new bureau.

### ***Training***

Training of any kind in a small department always poses some problems, and training a juvenile officer for his specialized type of work posed exceptional difficulties, since he requires training which the

*Chief George N. Roope.*

patrolman does not receive. Robert Baumgart, our juvenile officer, was ambitious enough to read many different articles and books on the subject of handling juveniles, but he frankly admitted that at the outset he was at a loss at times as to how best to proceed with certain cases. Close supervision of all cases is a "must" as each one must be handled individually, and no hard and fast rule will apply to all cases. The juvenile officer, of necessity, works practically on his own, and the mishandling of a case can do great harm not only to the juvenile but also to the police department.

Our training problem was solved by enrolling our juvenile officer in the Delinquency Control Institute at the University of Southern California. This school offers a 12-week course on the subject of handling and understanding the juvenile. Our officer enrolled in September of 1954, after he had been in juvenile work for about 5 months. By getting some practical experience "on the job" prior to attending the school, he obtained more benefit out of the school than he would have if he had attended prior to becoming oriented on the job.

The success of a juvenile bureau depends upon a trained officer doing his job. Our representative has been in demand as a speaker throughout southern Minnesota, and it was through his interest and labors that the National American Legion

*Juvenile Officer Robert Baumgart.*

donated a sum of money to the University of Southern California to help continue the Delinquency Control Institute.

### ***Policies***

The policy of the juvenile bureau should be decided upon by the chief and the juvenile officer. It must remain flexible, depending upon circumstances and the individual cases. Close cooperation and coordination must be maintained between the bureau and other agencies at all times. Good working arrangements must be kept with the juvenile court, the probation office, county and city attorneys, welfare agencies, the schools, and all other youth-serving agencies. Proper referrals are absolutely necessary and cannot be done without the cooperation of these agencies.

Through the cooperation of then Supt. Thomas Jones and Capt. Clifford Bailey of the Minneapolis Police Department, and Chief James Macken of the Rochester Police Department, we spent time inspecting their respective juvenile bureaus and received much help and advice in the establishment of our bureau. The ideas presented by these individuals have been of great value to us in the organization and operation of our bureau.

All juveniles contacted by the police department for any reason are processed through the juvenile bureau. By doing this, we are able to insure uniform handling of juveniles and maintain a juvenile record file of value. In general, the uniformed men like this method and furnish valuable aid to the juvenile bureau in every respect. The juvenile bureau in turn has the responsibility of informing the uniformed division regarding the disposition of juvenile cases.

### ***Curfew***

For many years we tried to enforce a curfew ordinance which lacked "teeth." Through the help of the local Parent-Teacher Associations we were able to "sell" a revised ordinance to the public and the city officials. The new ordinance has force and was directed at parents and at operators of amusement establishments where curfew violations could occur. It restricts any child under 16 from being on a public street after 10:30 p. m. and requires any child under 18 to be off the street after midnight. There were many doubts that a dual curfew ordinance such as this could and would be enforceable. The uniformed division

cooperated by accepting the ordinance and worked wholeheartedly to enforce it.

Due to the fact that we had sold this new ordinance to the people through the P. T. A. groups prior to passage, we have had amazing success with it. Our ordinance requires a written warning to be sent to the parents of the violator. On the second offense a letter is mailed to the parents, calling attention to the second violation and warning them that a third offense will result in court action against them. To date, after 1½ years, we have only taken 2 sets of parents into court for allowing their children to violate our curfew ordinance. As yet, we have not had to charge any operator of a place of amusement for a violation of the curfew ordinance.

With the establishment of our juvenile bureau, and with the help of the new curfew ordinance, we have tried to institute a prevention program which we hope will combat the delinquency problem. To date, we have not yet reduced our delinquency rate, due to our increased youth population. We feel, however, that we are making progress on a prevention program which will "pay off" in a reduced delinquency rate in the future.

In the very near future, I intend to add another man to the juvenile bureau. The workload is too much for one man, and the objective of our prevention program can be attained more readily with the help of an additional man. The responsibility of the second man will be primarily to check the spots where juveniles congregate at night, and also he can be used to good advantage in enforcing our present curfew ordinance.

### **Benefits**

Because of our rising national juvenile crime rates and growing juvenile population, it seems to me a juvenile bureau is a fundamental necessity in any police department, regardless of size. Any police administrator who analyzes the work done by his department will soon realize that a good percentage of that work concerns juveniles. Train one man or several men to do that type of work efficiently, and you have made a valuable contribution to your department, the youth of your community, and to the community itself.

The cost of such a program is very small in comparison with the great dividends returned. The salary of the personnel in the juvenile bureau, of course, is the largest item. We furnish our juvenile officer with a car, which was a former squad

car. The clerical work was solved when we decided to use our police matron in the juvenile bureau. Records, files, and miscellaneous items do not entail any considerable expense.

Since the establishment of our juvenile bureau, we have been gratified by many compliments on our work in connection with the handling of the juvenile problem. A bureau of this type is not a "cure-all," and you do not eliminate your problems with juveniles after you have the bureau established. However, you do have the satisfaction of knowing that you are taking a step in the right direction by helping to guide this country's greatest asset, our youth.

### **ESCAPE AND RESCUE STATUTES**

On May 28, 1956, President Eisenhower approved new legislation which became effective on that date amending the Federal Escape and Rescue Statutes. The new law added to the provisions of section 752, U. S. Code, title 18, which now reads:

Whoever rescues or attempts to rescue or instigates, aids or assists the escape *or attempt to escape* of any person arrested upon a warrant or other process issued under any law of the United States, or committed to the custody of the Attorney General or to any institution by his direction, shall, if the custody or confinement is by virtue of an arrest on a charge of felony, or conviction of any offense, be fined not more than \$5,000 or imprisoned not more than 5 years, or both; or, if the custody or confinement is for extradition or by virtue of an arrest or charge of or for a misdemeanor, and prior to conviction, be fined not more than \$1,000 or imprisoned not more than 1 year, or both.

The portion in italics was added to this section of the statute by the new law, and it has the effect of broadening the FBI's jurisdiction under this section.

**CIVIL RIGHTS** investigations are made by the FBI at the direction of the Attorney General of United States, acting on the basis of Federal statutes enacted by the Congress.

### **CRIMES ON INDIAN RESERVATIONS**

Numerous aggravated offenses which occur on Indian reservations are within the scope of the FBI's jurisdiction. The Bureau of Indian Affairs, Department of the Interior, has jurisdiction in liquor and narcotics violations on these reservations.

## SCIENTIFIC AIDS

The police department of Youngstown, Ohio, had a "blessed event" in October 1955, and the new arrival is a Ford Vanette, a mobile crime laboratory. The "father" of the new arrival, the Youngstown Crime Laboratory, is also quite young; however, in its short span of life, it has proved itself as one of the most worthwhile branches of the Youngstown Police Department.

In January 1953, Paul Cress was appointed from the traffic accident squad to the position of chief of the Youngstown Police Department. The new chief had some definite plans concerning the future of the department. Mayor Frank X. Kryzan, who appointed Cress, had long recognized the need for a crime laboratory within the department. The mayor and chief were in agreement on many things.

After my graduation from the FBI National Academy in Washington, D. C., in June 1954, Chief Cress placed me in charge of the newly formed crime laboratory which consisted of 1 empty room, 1 desk and 4 men.

It was a meager beginning for what was to grow into an important and useful branch of crime investigation in Youngstown. The city council did its part by appropriating \$4,200 to start the project. The four men were willing and able

Chief Paul H. Cress.

## Mobile Unit Forms Essential Part of Crime Laboratory

by LT. GEORGE J. MAXIN, *Youngstown, Ohio,*  
*Police Department*

to do their part, and they started by doing painting and carpentry work. The chief detailed a member of the department, a judo instructor during the war, to teach the lab members judo. By sheer chance he was also a cabinetmaker and his skill in this respect was fully utilized in the construction of some very nice cabinets built to house the new equipment. Meanwhile, we consulted representatives of departments in nearby cities, where laboratories were in existence. The data thus gathered, together with the experience and ideas from the FBI National Academy, enabled our men to obtain a workable idea of procedure.

### Lab Personnel

One of the men, Patrolman Robert Balog, was sent to Chicago to attend the Leonarde Keeler Institute, and has become a skilled lie detector operator. Balog does not confine his activities or talents only to the lie detector. He also does all diagraming and sketching for the department, including composite drawings of descriptions, which training he received while attending the University of Denver. Detective Edward Przelomski, Patrolman Paul Mallery, and Patrolman John Johnson do the photography for the entire department.

The photo-lab is part of the laboratory and is compact and complete. A Rolleiflex camera has recently been purchased and is used exclusively for color. Color photography is used so that slides and a screen can be used in court rather than black and white photographs because the former are more graphic and give the jury a truer picture of the actual crime scene. Color photography, used in all homicide cases, also enables us to build up a file on the various types of wounds, both in size and the positions of the wounds. Colored slides are usually made of photographs taken at autopsies.

Patrolman Mallery recently attended the Eastman Kodak seminar on law enforcement photog-

raphy at Rochester, N. Y., and has for many years worked at photography as a hobby. Patrolman Mallery is also an accomplished gunsmith, and prior to his assignment to the crime laboratory maintained and repaired all firearms for the police department. Detective Przelomski's ability and experience as a detective are of particular value in crime scene searches.

Patrolman John Johnson, in addition to his work in the photo-lab, also maintains the technical apparatus in the crime laboratory and the technical apparatus on the mobile crime unit. The laboratory now has a Bausch and Lomb bullet comparison microscope and attached camera, one binocular-type microscope, and a three-dimensional stereoscopic microscope, plus many kits used in the field of criminal investigation.

### **Operations**

To date, the new department has lived up to expectations. Two crews consisting of two men in each are alternately on call at night. The mobile unit is called to all homicides, suicides, fatal accidents, "safe jobs," burglaries, etc. On homicides, all of the men are detailed to the scene. Crime scene searches plus preservation and examination of all evidence are the duties of the lab crews. So far, through the use of crime scene searches, over 30 burglaries in the past 2½ years have been solved through the detection and matching of latent fingerprints found at crime scenes. Testimony of the lab crews in court has helped successfully complete many cases. In a recent homicide case, the photographs and crime scene charts easily dis-

proved the defendant's story that he dropped a .303 caliber Savage rifle on the bar of a local tavern, and that the gun accidentally discharged, killing the barmaid. The tests to which the rifle was subjected showed that even if it could have been discharged accidentally, the defendant had to hold the gun because of the difference in height of the bar, the victim, and the position of the entrance and exit wound and course taken by the bullet. The defendant received a life sentence, being found guilty of first degree murder.

The Youngstown Crime Laboratory also has been successful in identifying the body of a man who was killed by a train. All usual methods failed and, due to the condition of the body, a death mask was made utilizing posmoulage as the negative and plaster-of-paris as the positive (see illustration). When the mask was cast, Patrolman Robert Balog used his skill with paints and effected a natural skin hue. The victim's glasses were also used. Two days later, the mask was shown to two men who had heard of the unidentified dead man. From the mask, they positively identified the victim as a resident of Youngstown, Ohio. This identity was later corroborated by positive fingerprint identification by the FBI.

On January 20, 1956, Patrolmen Paul Mallery and John Johnson were at the crime scene of a burglary of a manufacturing company in Youngstown, Ohio. While searching the scene, they noticed a heel impression almost at the top of a stairwell. It was necessary to use a ladder to reach the print. The officers photographed the print and developed the picture and were able to see three noticeable gouge marks in the heel. Detectives

*Mobile crime laboratory with equipment transported therein.*

**Comparison photographs: A, suspect's heel print; B, crime scene print.**

who were assigned to the case arrested a suspect and an inked impression was made of his shoes. A positive identification was made from the right heel impression of the suspect and the print photographed at the crime scene. This comparison was made in the presence of the suspect, who readily admitted the burglary when shown the comparison (see illustration).

### **Equipment**

The completely equipped mobile unit has its own power sources. One generator is permanently installed in the truck, while another is portable and can be carried wherever needed. The portable generator is used with a portable searchlight having a range of 6 miles. When the lens of the searchlight is changed the powerful beam is diffused and becomes a floodlight. Two other portable floodlights work off the permanently mounted generator. A reel, mounted inside the truck, holds 200 feet of extension cord and is easily accessible to the exterior by means of a cord which can be pulled out through a compartment built into the side of the truck. The entire unit is self-sustained as far as electrical equipment is concerned. A charger takes care of the truck battery, operating either off the electric generator or from an outside source. A portable X-ray and fluoroscope unit is also installed in the truck, and all laboratory men have received training on the operation

of this equipment. The new truck is one of the few types equipped with a sink and running water, useful in the making of casts and death masks where water is not easily available. The latest innovation for the truck is the installation of a Hi-Fi tape recorder for on-the-spot statements at a crime scene. The value of this instrument lies in the fact that witnesses oftentimes change their stories between verbal and written statements and a play-back sometimes refreshes their memories.

All chemical and blood work for the laboratory is done by Dr. Arthur E. Rappoport, pathologist for the Youngstown Hospital Association. Dr. Rappoport and two of his associates recently received national recognition in cancer research.

Our newest unit for fighting crime has gained the respect of the entire city of Youngstown and is proving its worth.

★

### **SHOE CLUE**

Safecrackers frequently step on the insulating material blown out of a safe's wall, and traces of this insulation may remain on their shoes for days.

### **FOOTPRINTS**

A file on footprints is maintained in the Identification Division of the FBI on handless persons who have been arrested.

# IDENTIFICATION

In previous issues of the *FBI Law Enforcement Bulletin*, the division of the criminal file in the FBI Identification Division by sex, age, amputation, deceased, mutilation, primary, secondary, small letters, and subsecondary classification was discussed. In order to provide a further subdivision, the major, final, and key classification, in addition to the other classification, is used (see fig. 1). A definite order or sequence of filing by major, final, and key will be discussed in this article.

## Major

The major appears just to the left of the primary in the classification formula. The major is similar to the subsecondary classification, although it pertains only to the thumbs (Nos. 1 and 6). Where whorls appear in the thumbs, the major reflects the whorl tracings. When whorls appear, the major will be either I (Inner), M (Meeting), or O (Outer). Where loops appear in the thumbs,

## Sequencing and Filing the FBI's Fingerprint Cards

however, a table is used to translate the ridge counts into the small, medium, or large groups, designated by S, M, and L. An expanding table is used for the right thumb when large-count loops appear in the left thumb, as shown in the following chart (see fig. 2). This device is used because it affords a more equitable distribution of prints as a whole for filing purposes within the groups indicated. The following sequence is used when loops appear in both thumbs:

S M L S M L S M L  
S S S M M M L L L

When a loop appears in the right thumb and a whorl in the left, the sequence is:

S M L S M L S M L  
I I I M M M O O O

When a whorl appears in the right thumb and a loop in the left, the sequence is:

I M O I M O I M O  
S S S M M M L L L

LIU IOI

Figure 3.

When whorls appear in both thumbs the sequence is:

I M O I M O I M O  
I I I M M M O O O

### Final

Within the subdivided groups there is a definite sequence or order of filing. This order is attained through the use of the final. The final is obtained from the actual ridge count of the loop in the right little finger (No. 5). If a loop does not appear in the right little finger, a loop in the left little finger (No. 10) may be used. If no loops appear in the little fingers, a whorl may be used to obtain a final, counting from left delta to core if in the right hand and right delta to core if in the left hand. If both little fingers are plain or tented arches, no final is used. The use of a whorl in a little finger for a final is required only in connection with a large group or collection of prints, such as the 32 over 32 primary group. The final is indicated in the classification formula at the extreme right of the numerator, if obtained from

No. 5 and the extreme right of the denominator if obtained from No. 10.

When all prints are a particular primary, secondary, subsecondary, and major, the group is arranged in numerical sequence according to final. For example, assume that there are several prints in a group having a final of 10—in this case all of these should be filed together and followed by those prints in the same group having a final of 11 (see fig. 3).

### Key

The key is obtained by counting the ridges in the first loop appearing in the set of prints, beginning with the right thumb and exclusive of the little fingers, which are never considered for the key as they are reserved for the final. The key, no matter where found, is always to the extreme left of the numerator of the classification formula. All prints with the same final are sequenced and filed in numerical order by key. The key and final may be considered control figures for filing and searching prints, which can be seen in the illustration, figure 4.

## OTHER TOPICS

On December 27, 1955, the Louisville Division of Police locked its doors in the city hall for the first time in 83 years and resumed operations in its new headquarters. So smooth was the transition that not a single police call was missed.

The acquisition of a new and modern police headquarters building of 130,000 square feet of floorspace at a cost of \$2 million to the taxpayers was not an easy accomplishment. The question might be posed, "When did you begin to plan for such an operation?"

Truthfully, these efforts date back to 1907, when a beautiful, spacious, modern building was designed and built for police headquarters. However, the police did not reckon with the city fathers of that era. As this building neared completion, it became more and more evident that there was a feeling that such a beautiful building was too good for a police headquarters. Besides, quarters for tax offices and a police court were needed. It was then and there determined that the police should remain in the city hall. This arrangement continued for another 48 years.

The need for a police headquarters obviously did not lessen. As time went on, each police chief futilely called this to the attention of the administration in his annual report.

### **Bond Issue**

In 1952, a plan was approved by Mayor Charles P. Farnsley and the board of aldermen to submit a bond issue of \$2 million to be voted on in a mayoralty election, which required a two-thirds majority of votes cast to be approved.

For 30 years our department has operated under strict civil service, which precluded participation in an election. However, permission was granted by the mayor, the director of safety, and the civil service board for us to sell the public on the necessity of these facilities.

Our procedure in this instance was as well planned as any major operation connected with police activity. A speakers' bureau was formed,

## **Louisville Police Department Obtains Modern Facilities**

by COL. CARL E. HEUSTIS, *Chief of Police,  
Louisville, Ky.*

consisting of 25 police officers from all ranks of the department.

Post cards were mailed to local church groups, civic organizations, labor unions, and luncheon clubs, requesting that we be permitted to appear at their regular weekly or monthly meetings for a period of only 5 minutes. Not one request was denied.

The Louisville Chamber of Commerce endorsed our efforts as did the local press. The Louisville Police Officers Association plastered the city with window displays. Bumper strips were placed on thousands of motor vehicles.

On election day, November 4, 1952, we had more than a passing interest in the voting results. We were rewarded with 72.4 percent of the votes for the bond issue in our favor.

**Col. Carl E. Heustis.**

## *Advance Planning*

Executive officers of the department for a period of 3 years prior to the bond issue had been dispatched on missions throughout the Nation to observe at first hand police headquarters which had been acquired in the last 20 years.

Our planning and operations officer, Maj. William G. Kiefer, was placed in charge of the entire program, coordinating desirable features and innovations observed in other police headquarters. Each top-ranking officer of the department was given the opportunity to discuss in detail the future needs for the efficient operation of the Bureau under his supervision.

We had received the approval from the city administration to plan this building with the assistance of a professional architect, acceptable to the administration and to our department. This was a radical departure from the procedure which had been followed for many years. The department of works was free of any responsibility of planning. This was "our baby."

Many months prior to the passing of the bond issue, we were in daily conference with our architect, who in turn was busily engaged at the draftsman's board, taking time out occasionally to fly to various cities for tours of new police facilities.

By the end of 1953, our finished blueprints were off the drawing board and ready for the final approval of Mayor Andrew Broaddus, who was inaugurated on December 1, 1953, and Col. W. George Matton, director of safety.

The plans were immediately approved, and ground was broken February 25, 1954. Twenty-two months later, on December 27, 1955, the entire police headquarters moved to the new building.

In the meantime, about 95 percent of the new building had been equipped with new furniture costing \$162,500. Our building, land, and architects' fees amounted to \$1,865,500.

The building consists of four stories, plus a penthouse. Each floor affords approximately 25,000 square feet of floorspace.

## *The Basement*

All prisoners are brought into our headquarters via the basement through a treadle-operated overhead door. All exits are automatically locked before the prisoner alights from the car. In the booking clerk's area, there are four separate hold-

over cells where all prisoners are booked, fingerprinted, photographed, and recorded statistically before being released on bail, or sent by escape-proof elevator to the fourth floor cell block. An underground passageway, 10 feet square and brilliantly lighted, connects the police headquarters building with the new and roomy hold-over in the police court building, which is 70 feet east of the police headquarters building. The prisoner elevator, key-operated and escapeproof, contains a steel mesh cage which the turnkey may lock and use in transporting prisoners to the cell block. There are no exits from this elevator shaft on either the second or third floors.

A spacious property room located in the basement for all property brought in by police officers is equipped with a large walk-in vault for full security of jewelry, cash, etc. Adjoining the valuables' vault is a combination fur vault and refrigerator lined with 6 inches of cork and capable of maintaining 32° temperature.

## *Indoor Range*

An indoor small firearms range has six firing positions permitting firearms training throughout the year. It is adequately soundproofed to avoid interference with other operations of the department. All motorcycles of the division of police are housed in the basement and motorcycle patrolmen plug "trickle chargers" into the batteries of the motorcycles powering the 2-way radios while they are not in use. Twelve additional parking spaces are available for patrol wagons, emergency rescue trucks, and cruisers parking while prisoners are being booked.

The Louisville Police Officers Association owns and operates a "nickel in the slot" canteen system where police officers may obtain coffee, hot chocolate, ice cream, soft drinks, cigarettes, sweet milk, chocolate milk, sandwiches, and candy. The profits from the canteen are placed in the Louisville Police Officers Association sick and death benefit fund.

## *The Main Floor*

At the reception desk, centralized for the first time, citizens may transact business, such as paying traffic fines, obtaining copies of accident reports, or simply seeking information. Twin automatic elevators noiselessly serve the four floors of this building. The bureau of records and

identification occupies several large offices, each of which has a separate and unique function. Included in it is a room for the radio dispatchers. Another room houses a double switchboard with 900 pairs of lines and 18 outside trunks. This is a compact conference-type telephone hookup and all outgoing calls are bypassed without interfering with our switchboard operators. The teletype equipment of the division of police connecting all units of the department is rented from the Bell Telephone Co. A pneumatic-tube system connects all major offices of the division of police, as well as the offices of police court adjoining our building. The photographic laboratory, designed by the Eastman Kodak Co., has six separate rooms, and we believe it is one of the most modern in the Nation. A special room for mechanical book-keeping is now in operation and all statistical reports and the modus operandi system of the department are being processed.

Large assembly rooms with adequate bulletin boards and facilities for reading teletypes are also located on this floor. Immediately adjacent to the assembly rooms are locker rooms where each police officer is assigned an individual steel locker.

Each locker room is equipped with a large rest-room and shower. Full-length mirrors have been installed, as well as electric shoe-polishing machines. A suite of captains' and lieutenants' offices of the uniformed division are separated by removable steel sound-proofed partitions which may be snapped out of the floor and ceiling to change the sizes of these offices at any desired time.

The spacious executive offices of the department are paneled entirely in dark walnut. There is a walnut-paneled, hotel-type suite, complete with private bedroom for visiting peace officers who wish to remain overnight. This suite is also used by Federal law enforcement officers and military police for the interrogation of prisoners and witnesses.

### *The Second Floor*

The second floor houses all branches of the detective bureau, crime prevention, and missing persons bureau, personnel and education section.

The detective assembly room is equipped with a desk for each detective in the department. The showup is as carefully lighted as any Broadway

*A session in the classroom equipped with public address system, acoustical tile, and movie projection facilities.*

stage, and four rheostats control the lights of the showup to any degree of intensity to simulate the conditions under which a crime occurred.

### **Auditorium-gym**

A combination auditorium and gymnasium, with a seating capacity of 750, has a rock maple floor laid on top of three-quarters of an inch of cork to prevent the transmission of any sound to other parts of the building while this room is being used for basketball, handball, calisthenics, boxing or wrestling. A 16-foot, motor-operated, movie-type screen is located on the end wall, 90 feet from the projection booth on the fourth floor. Traffic school is also held in this auditorium two nights each week. Two schoolrooms for the division of police are located on this floor. One with a seating capacity of 50 is used for training recruit officers and another seating 25 is used for training police recruits.

Seven rooms, completely separated from adult detention cells, provide the Crime Prevention and

Missing Persons Bureau adequate quarters for lodging delinquents.

### **The Top Floor**

Cell blocks providing maximum security for 260 male and female prisoners are well lighted and well ventilated, with fresh air provided approximately every 3 minutes by a system of fans installed on the roof.

Few hotels can boast of a more complete kitchen for preparing nourishing meals for trusties and prisoners. A complete commercial-type laundry also is located on this floor where the clothing and linens of prisoners are thoroughly cleaned. Facilities also are provided for a doctor's suite, which consists of a room for the treatment of patients, and a private bedroom and bath adjoining for the doctor or intern on this assignment.

Yes, we are proud of this building—not because it is handsome and new, but because it helps us to do a better job of protecting the rights and lives of the citizens of Louisville.

*Louisville police headquarters building with lower portion in Texas red granite and upper part in Vermont green-gray marble.*

# **How Car Dealers Can Help Curb Auto Thefts**

by **RAYMOND A. SULLIVAN**, *Editor of NADA,  
National Automobile Dealers Association*

During the past 5 years, approximately 217,000 autos were stolen annually in this country, an increase of 45,000 per year over the previous 4-year period. Since over 90 percent of these stolen cars were subsequently recovered, the people who suffered the greatest loss were the purchasers of the stolen cars. In most cases, these purchasers were automobile dealers.

Thus, dealers have a vital interest in attending the FBI-sponsored Law Enforcement Conferences being held throughout the country during 1956 for the purpose of combatting this crime.

Dealers can help combat auto theft by offering advice to car buyers to help prevent thefts and by being alert for persons attempting to sell stolen cars. By doing this, naturally the dealer is also going to save himself expense.

Car dealers should make sure that customers—especially first-time car buyers—know the fundamental aids in avoiding car thefts. These include the removing of keys while the car is parked and the locking of doors and the closing of windows. Also, buyers might be cautioned never to pick up hitchhikers; to avoid parking in unlighted areas, and not to leave valuables in cars, even locked ones, in sight of potential car thieves.

In the regular course of business, car dealers and salesmen should be always on the lookout for a number of suspicious conditions which might lead to the apprehension of an auto thief. The following list of checks should be brought to the attention of all employees of car sales agencies, and the list should be posted in such firms as a reminder. The practice will not only save money for the firm but will also help the local auto theft bureau.

1. Keys should be examined carefully to see if they are originals or are duplicates.
2. Vent glass on both sides should be checked for replacement or holes.
3. The ignition switch should be checked for evidence of tampering.
4. New tags on an old auto, or vice versa, should be noted as a possible indication that the car was stolen.

5. It should be noted whether or not the registration is recent. Frequently, legitimate individuals are negligent about reregistering a car just prior to selling it.

6. The bill of sale of a used car is seldom notarized. Thieves often have it notarized to make it appear legitimate.

7. If the car has out-of-State plates, find out if that State has a title law. If it does, request the seller of the car to show a title.

8. Note whether the seller of the car "fits the car." A rough-looking, poorly dressed individual with no evidence of employment who attempts to sell an expensive late model automobile should normally arouse suspicion.

All in all, note the unusual, such as a driver unfamiliar with his car, or a car with 1 plate from a State which requires 2. If there is any suspicion, the local FBI office or Auto Theft Bureau should be notified.

## **Effective System**

One city has an effective way of trapping auto thieves via cooperation among auto dealers. When the suspicion of one dealer has been aroused, he will refer the seller to another dealer, telling the seller that he, personally, is overstocked. When the suspect leaves for the other lot, the first dealer calls the police, and the officials are on the second lot before the seller arrives.

Due to the scope of the problem, increasing means of preventing and solving auto thefts are being adopted continuously in communities across the country. Many police departments have set up auto theft squads and in addition all officers of the department are given extensive training in the techniques of spotting "hot cars" and interviewing individuals suspected of auto theft. Such officers are thoroughly acquainted with the danger signs of auto thefts and have little difficulty in detecting a stolen car.

In Memphis, Tenn., a systematic auto theft check not only makes it hot on thieves operating in the city but also discourages out-of-State car thieves from peddling their stolen wares in Memphis. The bureau is assisted by an ordinance which requires all dealers to report purchases of second-hand automobiles to them on a daily basis. Dealers are not allowed to dispose of those vehicles until 24 hours after they have reported the purchase of them to the police department, so that the autos can be checked against the stolen car file.

Insurance companies have organized an agency known as the National Automobile Theft Bureau, which has five major offices across the country. This bureau assists any law enforcement officer on the trail of an auto theft by providing information on all cars reported stolen, or by actually assisting in the investigation. It is made up of specialists and technical experts in its field.

Despite all these deterrents to auto thieves, the problem still grows. And the automobile dealer can be a potent factor in the campaign against auto theft.

There are three categories of auto thieves with which the public and law enforcement have to contend. The first is the "joy ride" thief. These are mostly teen-agers who take a car just for the ride with no intention of selling it. Recent statistics have shown that 57.6 percent of those arrested for car theft were under 18 years of age. They were mostly "joy riders," but these facts point up how easy it is to steal a car. Education of the car-owning public is a most likely remedy here.

The next category is the thief who steals a car for the express purpose of using it in the commission of another crime, such as a bank robbery.

And the third category, which is of primary interest to the dealer, is the one in which the car is stolen expressly for resale. Car theft rings are on the increase. The rings are highly organized and now present the biggest problem to the public, to the police and to the dealer.

Against the professional car thief, the car dealers of the country can be of major assistance to law enforcement. Careful scrutiny of all cars brought to car lots for sale, close adherence to the check list provided here, and the continuous informing of the public and employees of the dangers of car thefts can lead to success against car thieves.

### SCIENCE CONVICTS DYNAMITERS

The FBI Laboratory recently was asked to examine numerous articles of evidence submitted in connection with the dynamiting of property owned by a telephone company in a southern city. The local police department had developed two suspects.

Among the 14 questioned specimens of evidence and 17 known specimens of evidence submitted were a small piece of leather taken from a telephone pole, a section of the telephone pole, shoes taken from one of the suspects, and the jeans of one of the suspects.

The Laboratory identified the small piece of leather from the pole with the left shoe of one of the suspects and also found that a small piece of wood found in this suspect's jeans was similar to the wood from the telephone pole in color, texture, and wood characteristics.

At the trial of the suspects, three examiners of the FBI Laboratory were made available to testify to their findings.

The two defendants were found guilty in both cases against them and their sentences, fixed by the jury to run consecutively, were three years in each case.

## FINGERPRINT CARDS

(Continued from page 16)

### The Filing Sequence

1. Primary, 1 over 1 to 32 over 32.
2. Secondary:
  - (a) Secondary small letter group, *A* over *A* to *rW3r* over *rW3r*.
  - (b) Secondary loop and whorl group, *R* over *R* to *W* over *W*.
3. Subsecondary: *III* over *III* to *OOO* over *OOO*.
4. Major:
  - (a) *S* over *S* to *L* over *L* (loop over loop).
  - (b) *I* over *I* to *O* over *O* (whorl over whorl).
  - (c) *S* over *I* to *L* over *O* (loop over whorl).
  - (d) *I* over *S* to *O* over *L* (whorl over loop).
5. Final: 1 out.
6. Key: 1 out.

### DETERMINED IMMIGRANT

An immigration applicant who wished to enter the United States legally in December 1955 apparently believed in practicing the old theory of "try, try again." When his fingerprints were searched in the criminal files of the Federal Bureau of Investigation, it was learned that the United States Immigration and Naturalization Service had deported him from the United States as early as 1930. Since that time he had re-entered illegally at least eight times and each time had either been deported or had been allowed to return to Mexico voluntarily. He had twice served short sentences for illegal re-entry into the United States.

This case portrays the value of fingerprints in alien control.

# **National Sheriffs' Association Holds Annual Conference**

The 16th Annual Conference of the National Sheriffs' Association was held in Akron, Ohio, on June 18-20, 1956. Nearly 400 persons registered for this conference, including delegates from practically all sections of the United States. Sheriff Raymond E. Woodard of Summit County, Ohio, was the host sheriff.

## **Speakers**

Speakers from the law enforcement field included Sheriff Glenn M. Hendrix of Greene County, Mo., retiring president of the association; Mr. Charles J. Hahn, executive secretary of the association; Sheriff Robert E. Stockdale of Portage County, Ohio; Sheriff Arden Rhyne of Leavenworth County, Kans.; and Sheriff H. P. "Jack" Gleason of Alameda County, Calif.

Guest speakers at the convention included Prof. Edward Linzer of the National Institute of Mental Health, New York City, who discussed the handling of mentally ill persons; Dr. Ruth Alexander of New York City, who spoke on the problems involved in handling cases of juvenile delinquency; and Prof. Arthur Sherry of the University of California, who discussed study projects currently being conducted into all phases of the administration of criminal justice in America.

## **Resolutions**

A number of resolutions were adopted by the convention, including the following:

1. Urging adoption of the Federal Narcotics Control Act of 1956.
2. Urging abolishment of the county jail as a temporary detention facility for the mentally ill.
3. Advocating the appointment of the sheriff as county civil defense director within the counties.
4. Urging passage of laws regulating the sale of law enforcement badges.
5. Opposing the single license plate system.
6. Advocating publication of sheriff's telephone numbers among emergency calls in telephone directories.
7. Urging adoption of standard crime abbreviations as prepared by the FBI.

8. Urging that the National Safety Council take immediate action to draw up and adopt a uniform universal highway traffic code and highway sign marking program in behalf of highway safety.

Sheriff H. P. "Jack" Gleason, of Alameda County, Calif., was elected to the presidency of the organization.

Other newly elected officers include seven vice presidents: Sheriff Dave Starr, Orlando, Fla.; Sheriff Ralph Paul, Columbus, Ohio; Sheriff Albert Jacobson, Marquette, Mich.; Sheriff L. E. Brown, Asheville, N. C.; Sheriff Hugh Anderson, Borger, Tex.; Sheriff William Parker, Mt. Holly, N. J.; and Sheriff Robert S. Moore of Arkansas City, Ark. Everett Knight of Limerick, Maine, and Lionel Poirier of Brooklyn, Conn., were elected honorary vice presidents. Sheriff Arthur Muisiner of Lockport, N. Y., was elected sergeant at arms, and Robert E. Moore of Detroit, Mich., was re-elected treasurer.

Galveston, Tex., was selected as the site of the 1957 convention. The convention was concluded by a banquet and outstanding entertainment provided by Raymond E. Woodard, the host sheriff, and Sheriff Ralph Paul, who provided the famous quartet, "The Singing Deputies," from Columbus, Ohio.

**Retiring President Glenn M. Hendrix (left) receives plaque from incoming President, H. P. "Jack" Gleason.**

# WANTED BY THE FBI

DAVID JOHN PAGE, with alias: H. Walsh

## Embezzlement of Government Property

David John Page, who was a disbursing officer on a United States aircraft carrier, failed to appear for muster on September 19, 1955. The ship's funds reflected a shortage of over \$70,000. A complaint was filed before a United States Commissioner at San Francisco, Calif., on September 23, 1955, charging Page with embezzlement of Government property.

## Remarks

Page reportedly is a careful dresser, having a strong preference for "Brooks Brothers" clothing and "Cavanaugh" hats. He is known as an extremely heavy drinker who frequently patronizes very expensive cocktail lounges and bars as well as lower class establishments, usually drinking "Queen Anne" scotch. He plays tennis and enjoys dramatic plays. He frequents expensive restaurants, especially when entertaining girl friends. He is reportedly familiar with the Spanish language.

David John Page.

## Description

David John Page is described as follows:

Age----- 23, born December 23, 1932, at New York, N. Y.  
Height----- 6 feet, 3 inches.  
Weight----- 190 pounds.  
Build----- Medium.  
Hair----- Brown.  
Eyes----- Brown.  
Complexion----- Dark.  
Race----- White.  
Nationality----- American.  
Occupation----- Disbursing officer.  
Scars and marks-- ½ inch scar over right eye, 1 inch scar on chin, red birthmark size of half dollar on right wrist, 2½ inch appendectomy scar.  
Remarks----- Reportedly drinks to excess.  
FBI number----- 63,350 C.  
Fingerprint clas- 19 M 13 R OMO  
sification. I 30 U OOI 19

## Notify FBI

Any person having information which may assist in locating this fugitive is requested to notify immediately the Director of the FBI, U. S. Department of Justice, Washington 25, D. C., or the special agent in charge of the nearest FBI field office.

## CHILD MOLESTER

*The technique of instructing children in traffic safety and alerting them to the dangers of associating with strangers through pamphlets and coloring sketches has been successfully used by many police agencies. Examples of this procedure previously cited in the FBI Law Enforcement Bulletin include "School Visits and Pamphlets Build a Safety Program," June 1955; "This Is Sherry," February 1956; and "Interesting Visual Aid," April 1956.*

*At this particular time, when schools are reconvening, the child molester poses an especially dangerous threat. To emphasize this threat and to attract the attention of youngsters to this danger, there appears on the adjacent page a graphic illustration with specific instructions for children concerning potential child molesters.*

*In the effort to give impetus to the campaign against the child molester menace, supplies of this sketch on plain white paper will be furnished free of charge. Agencies or individuals desiring to distribute them to schools or children's groups should request copies from the Director, FBI, Washington 25, D. C.*

# Boys and Girls

COLOR THE PICTURE AND MEMORIZE THE RULES

## FOR YOUR PROTECTION, REMEMBER TO:

- Turn down gifts from strangers
- Refuse rides offered by strangers
- Avoid dark and lonely streets
- Know your local policeman
